

TYPES OF CHARTS IN POWER BI

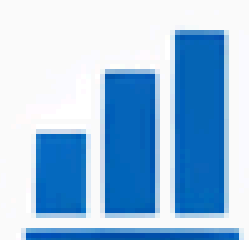

Column Chart in Power BI

Definition

A Column Chart is used to compare values across different categories using vertical bars.

Usage

Compare sales across months

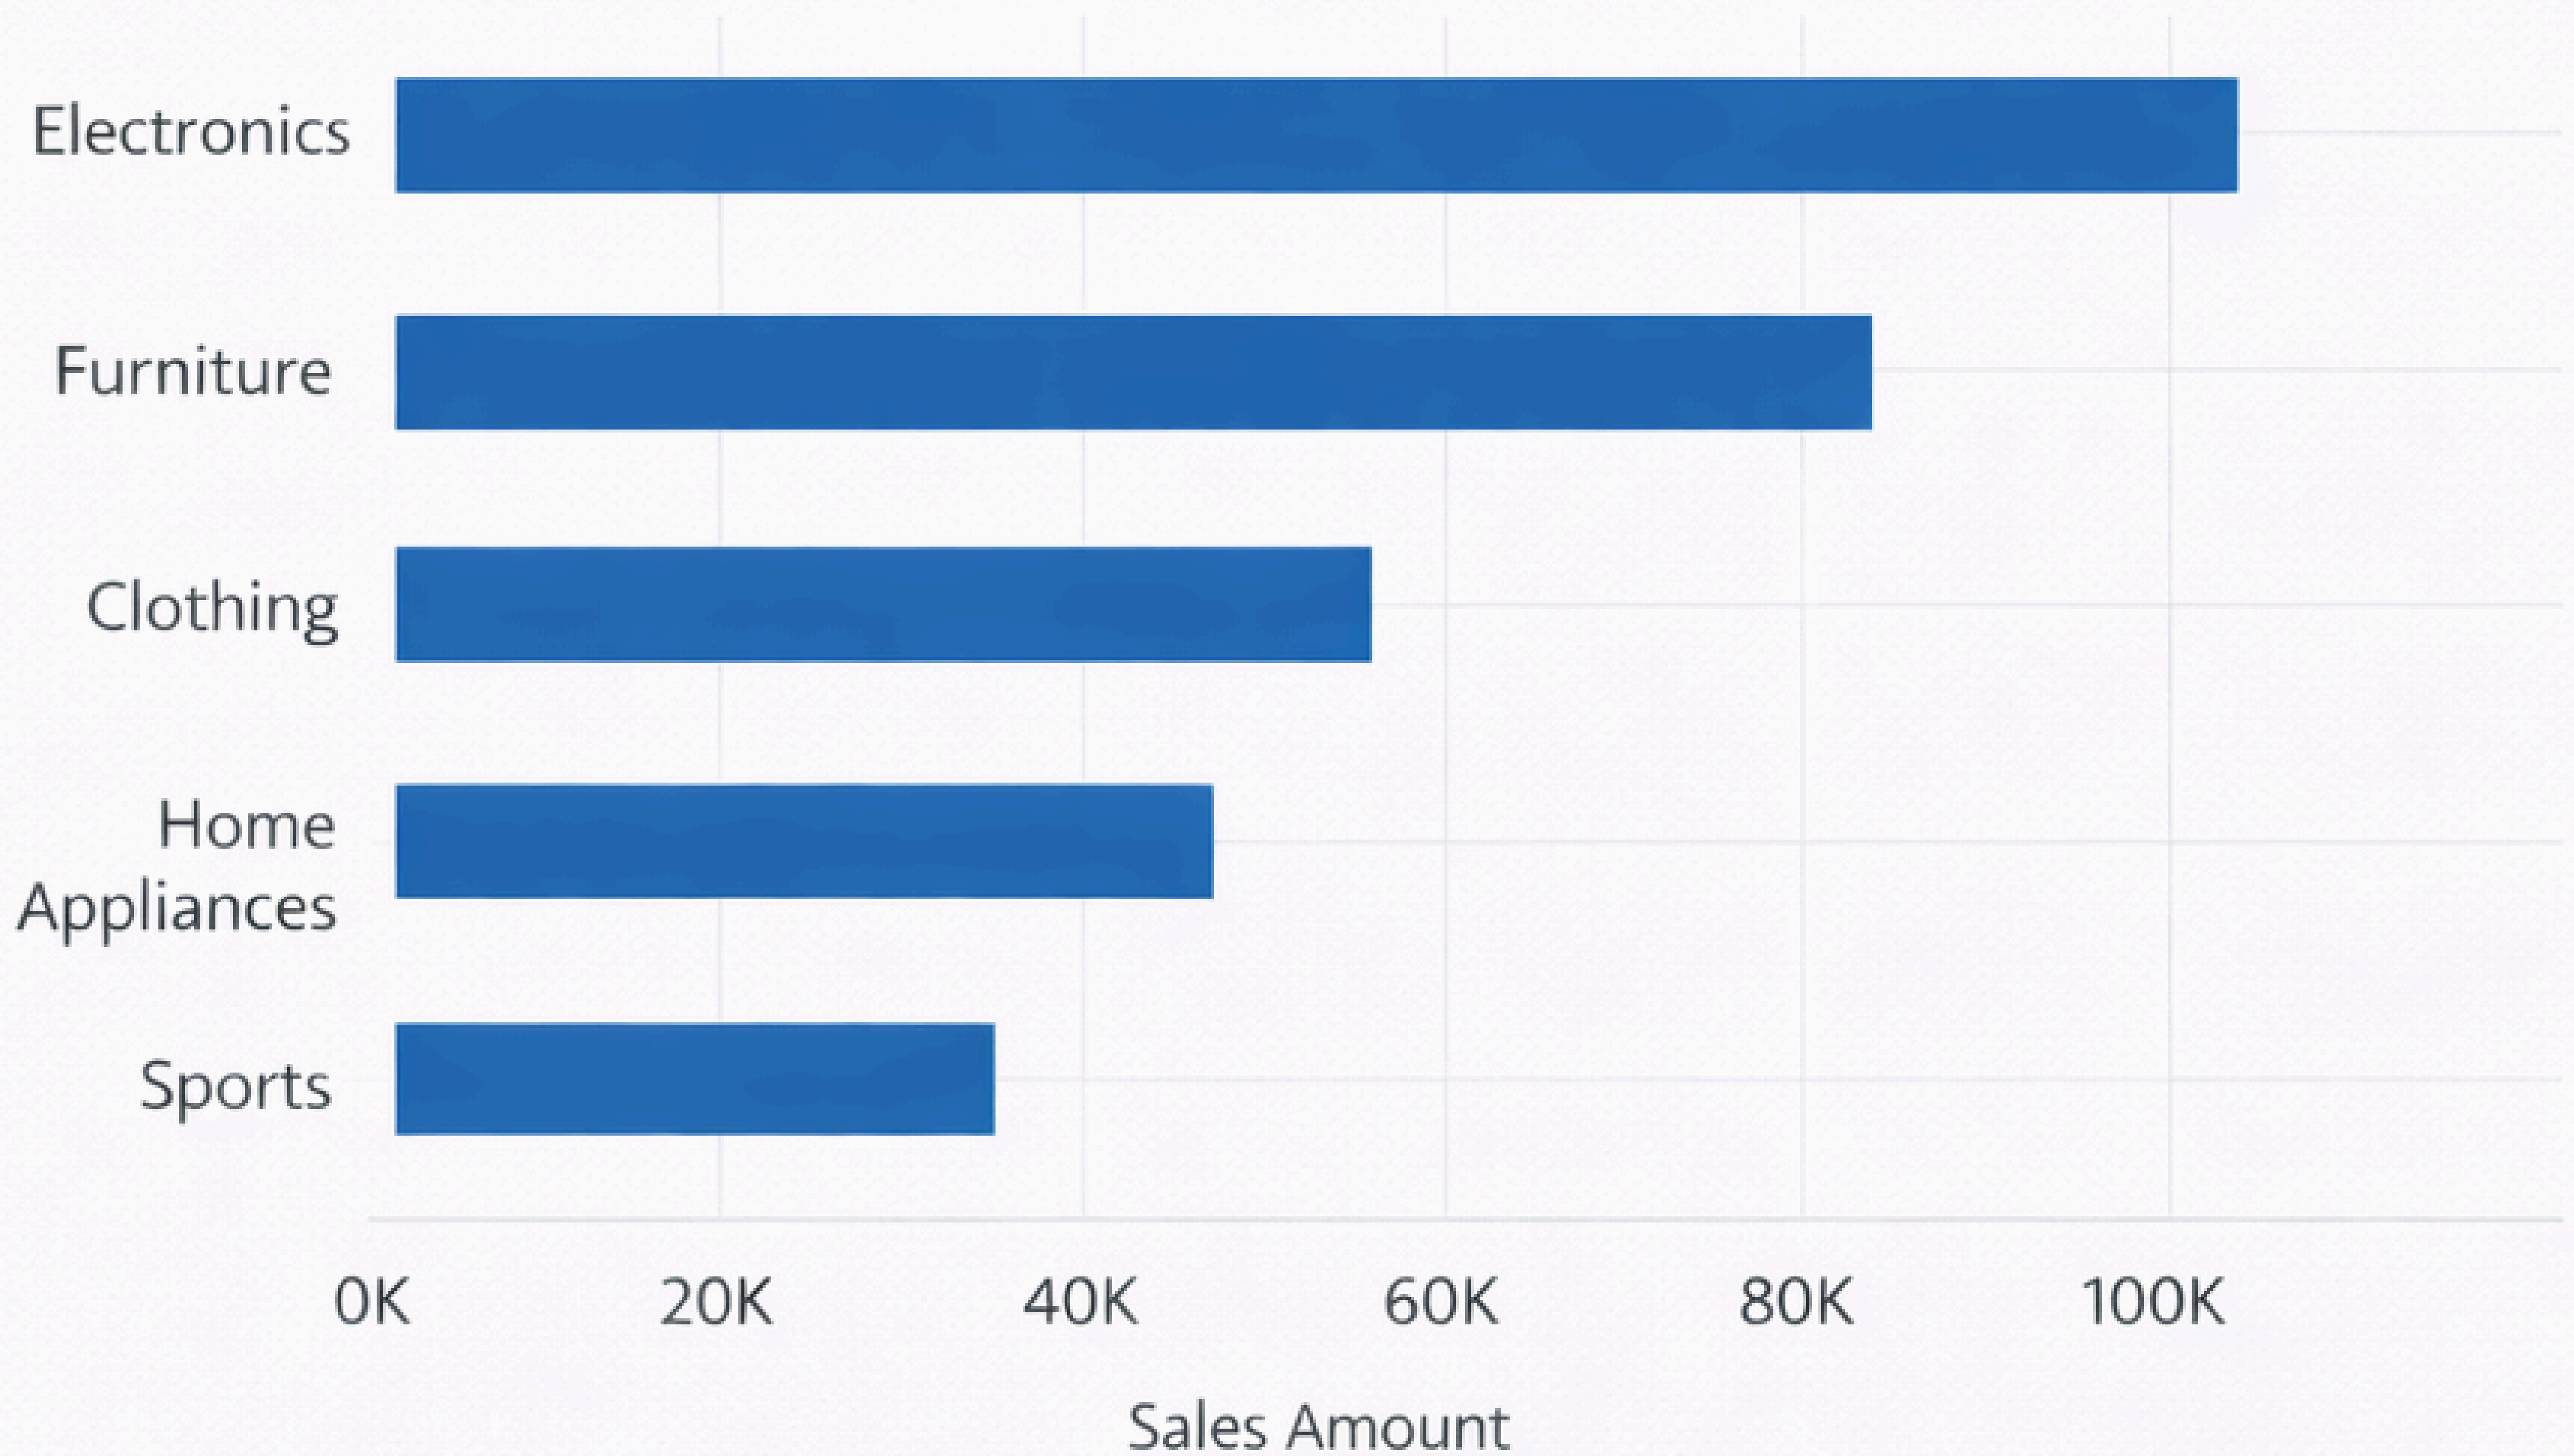

Analyze category-wise performance

Identify trends at a glance

Bar Chart in Power BI

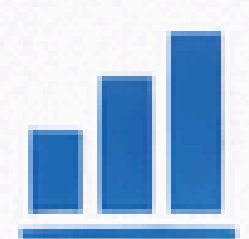

Sales by Category

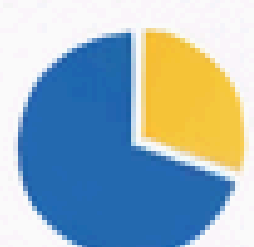

Definition

A **Bar Chart** displays data using horizontal bars to compare values across different categories.

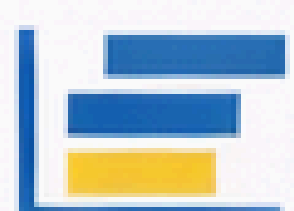

Usage

Compare sales by product or region

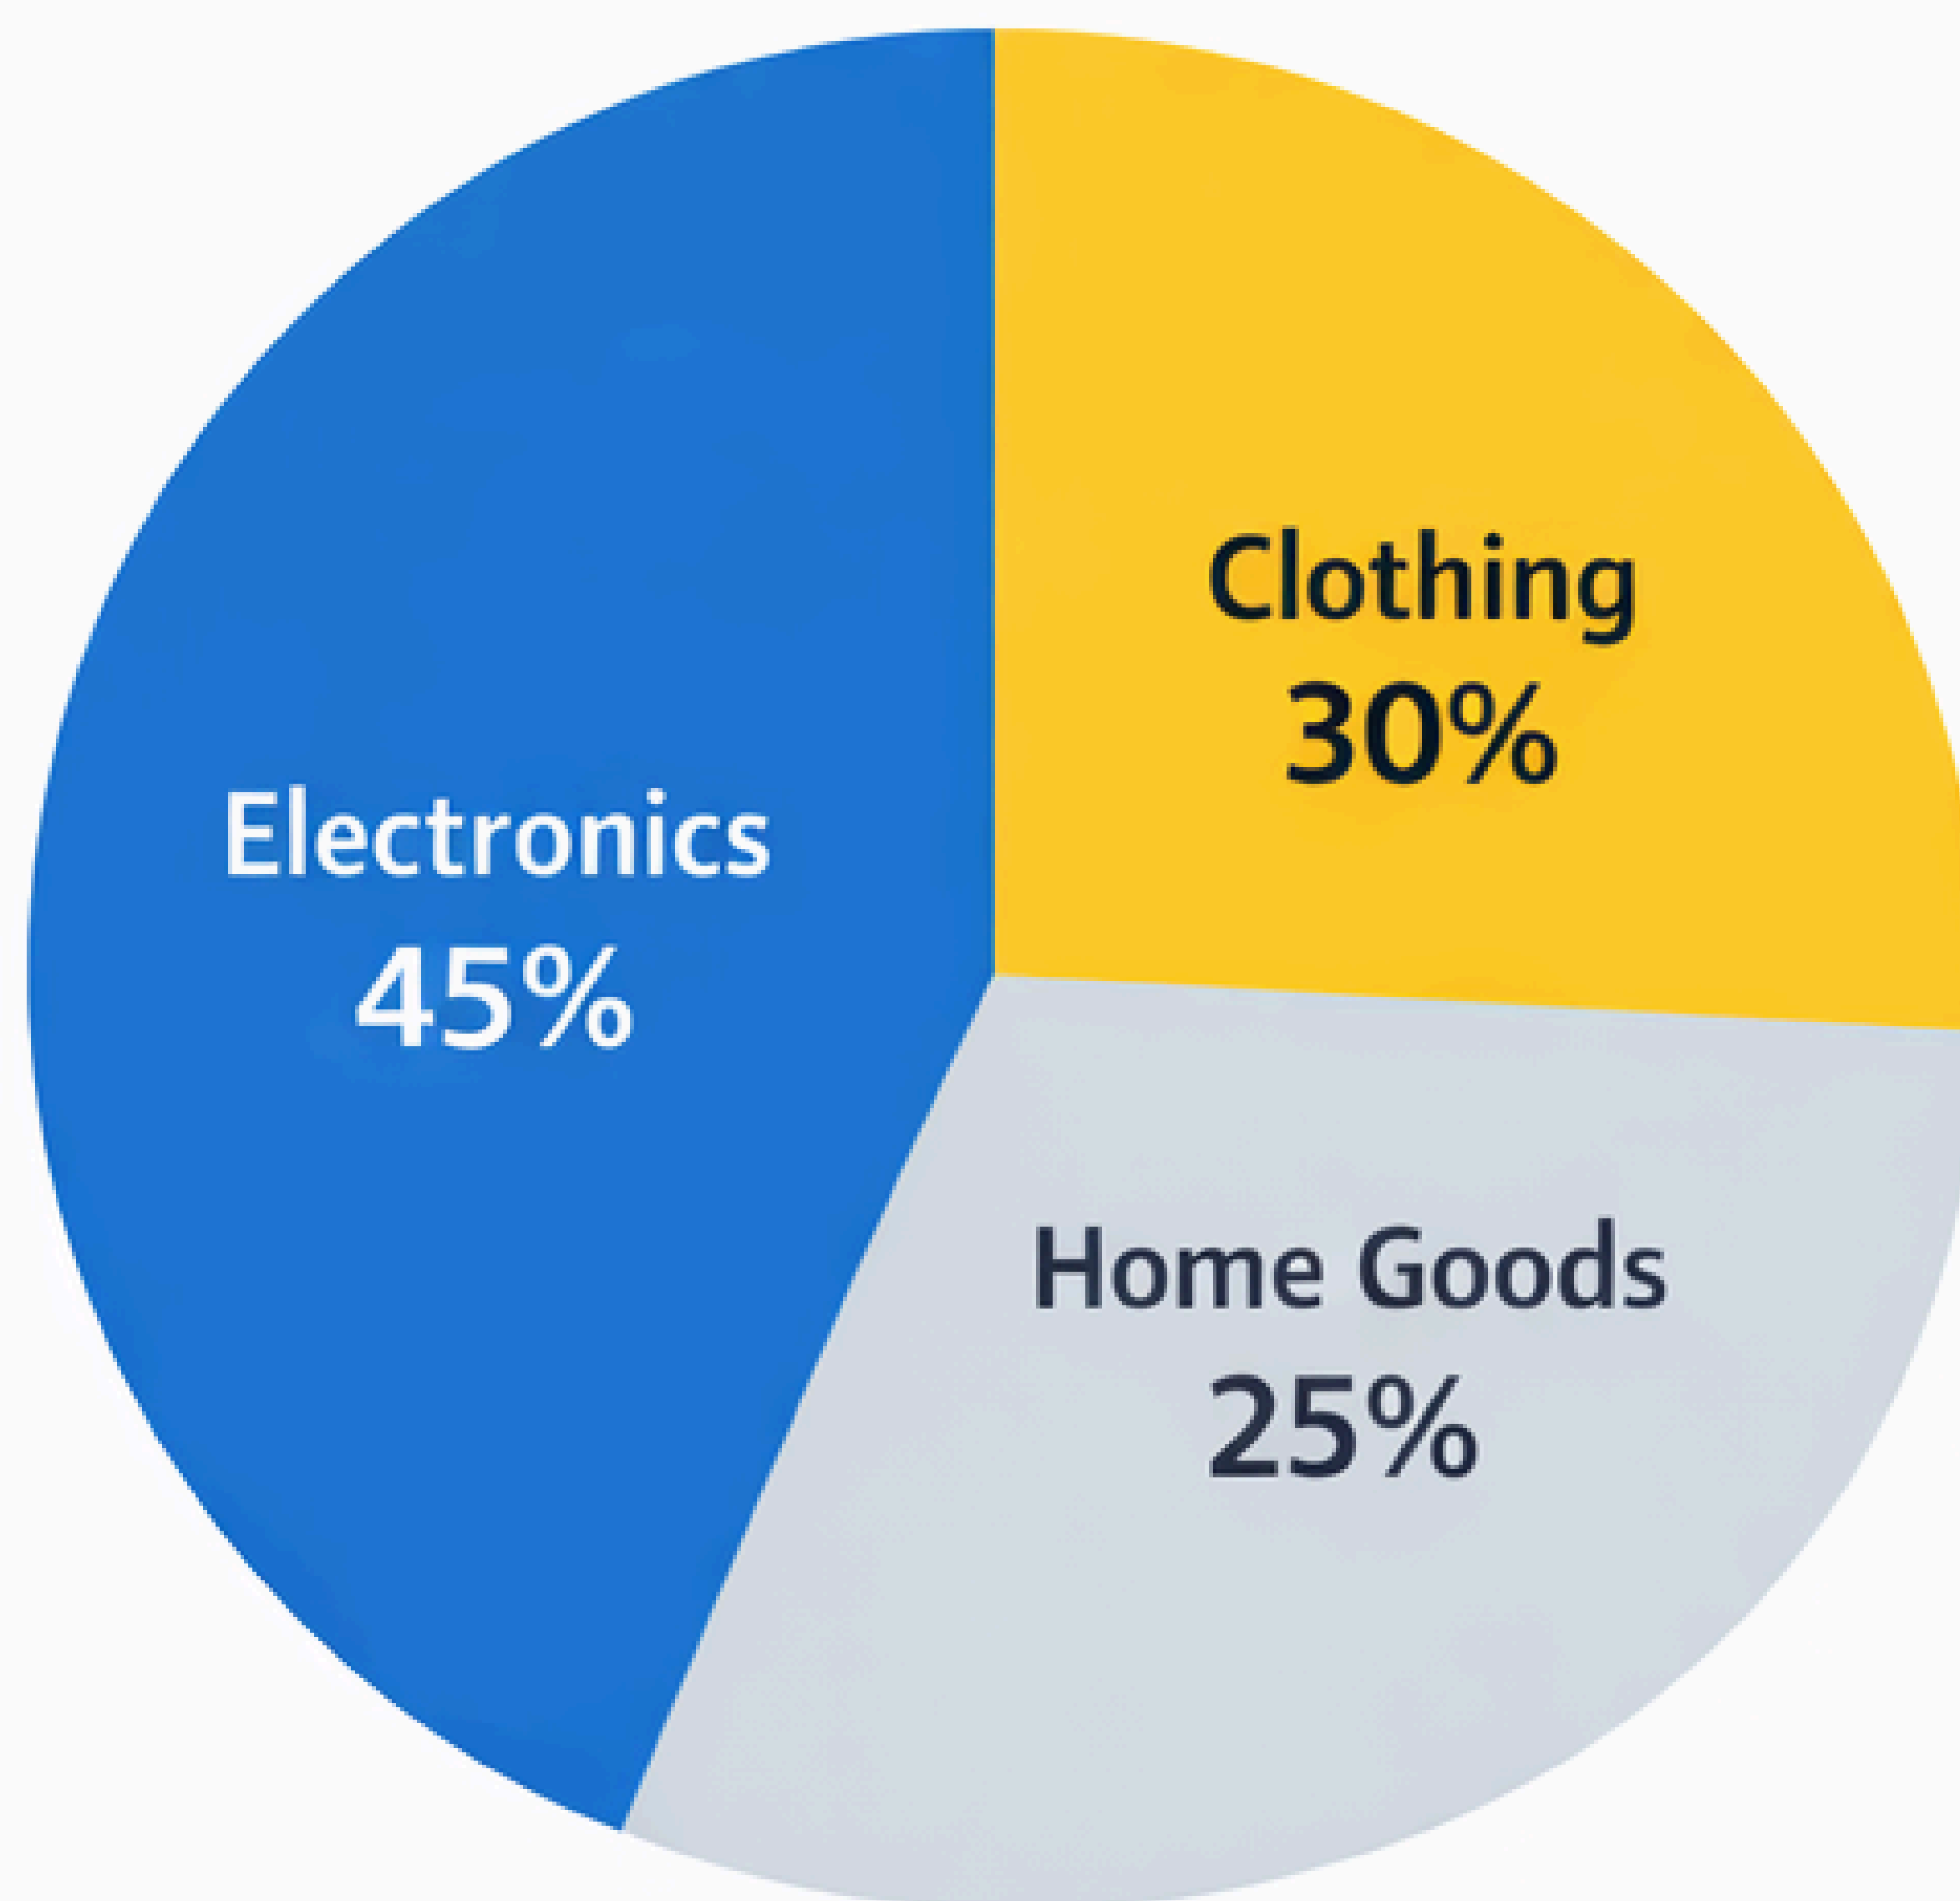

Analyze performance across categories

Best when category names are long

Pie Chart in Power BI

Sales by Category

Definition

A Pie Chart shows the proportion of each category as a part of the whole.

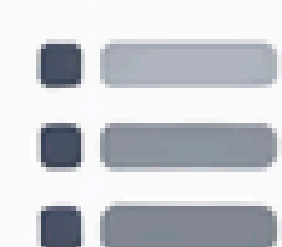

When to Use

To show percentage contribution

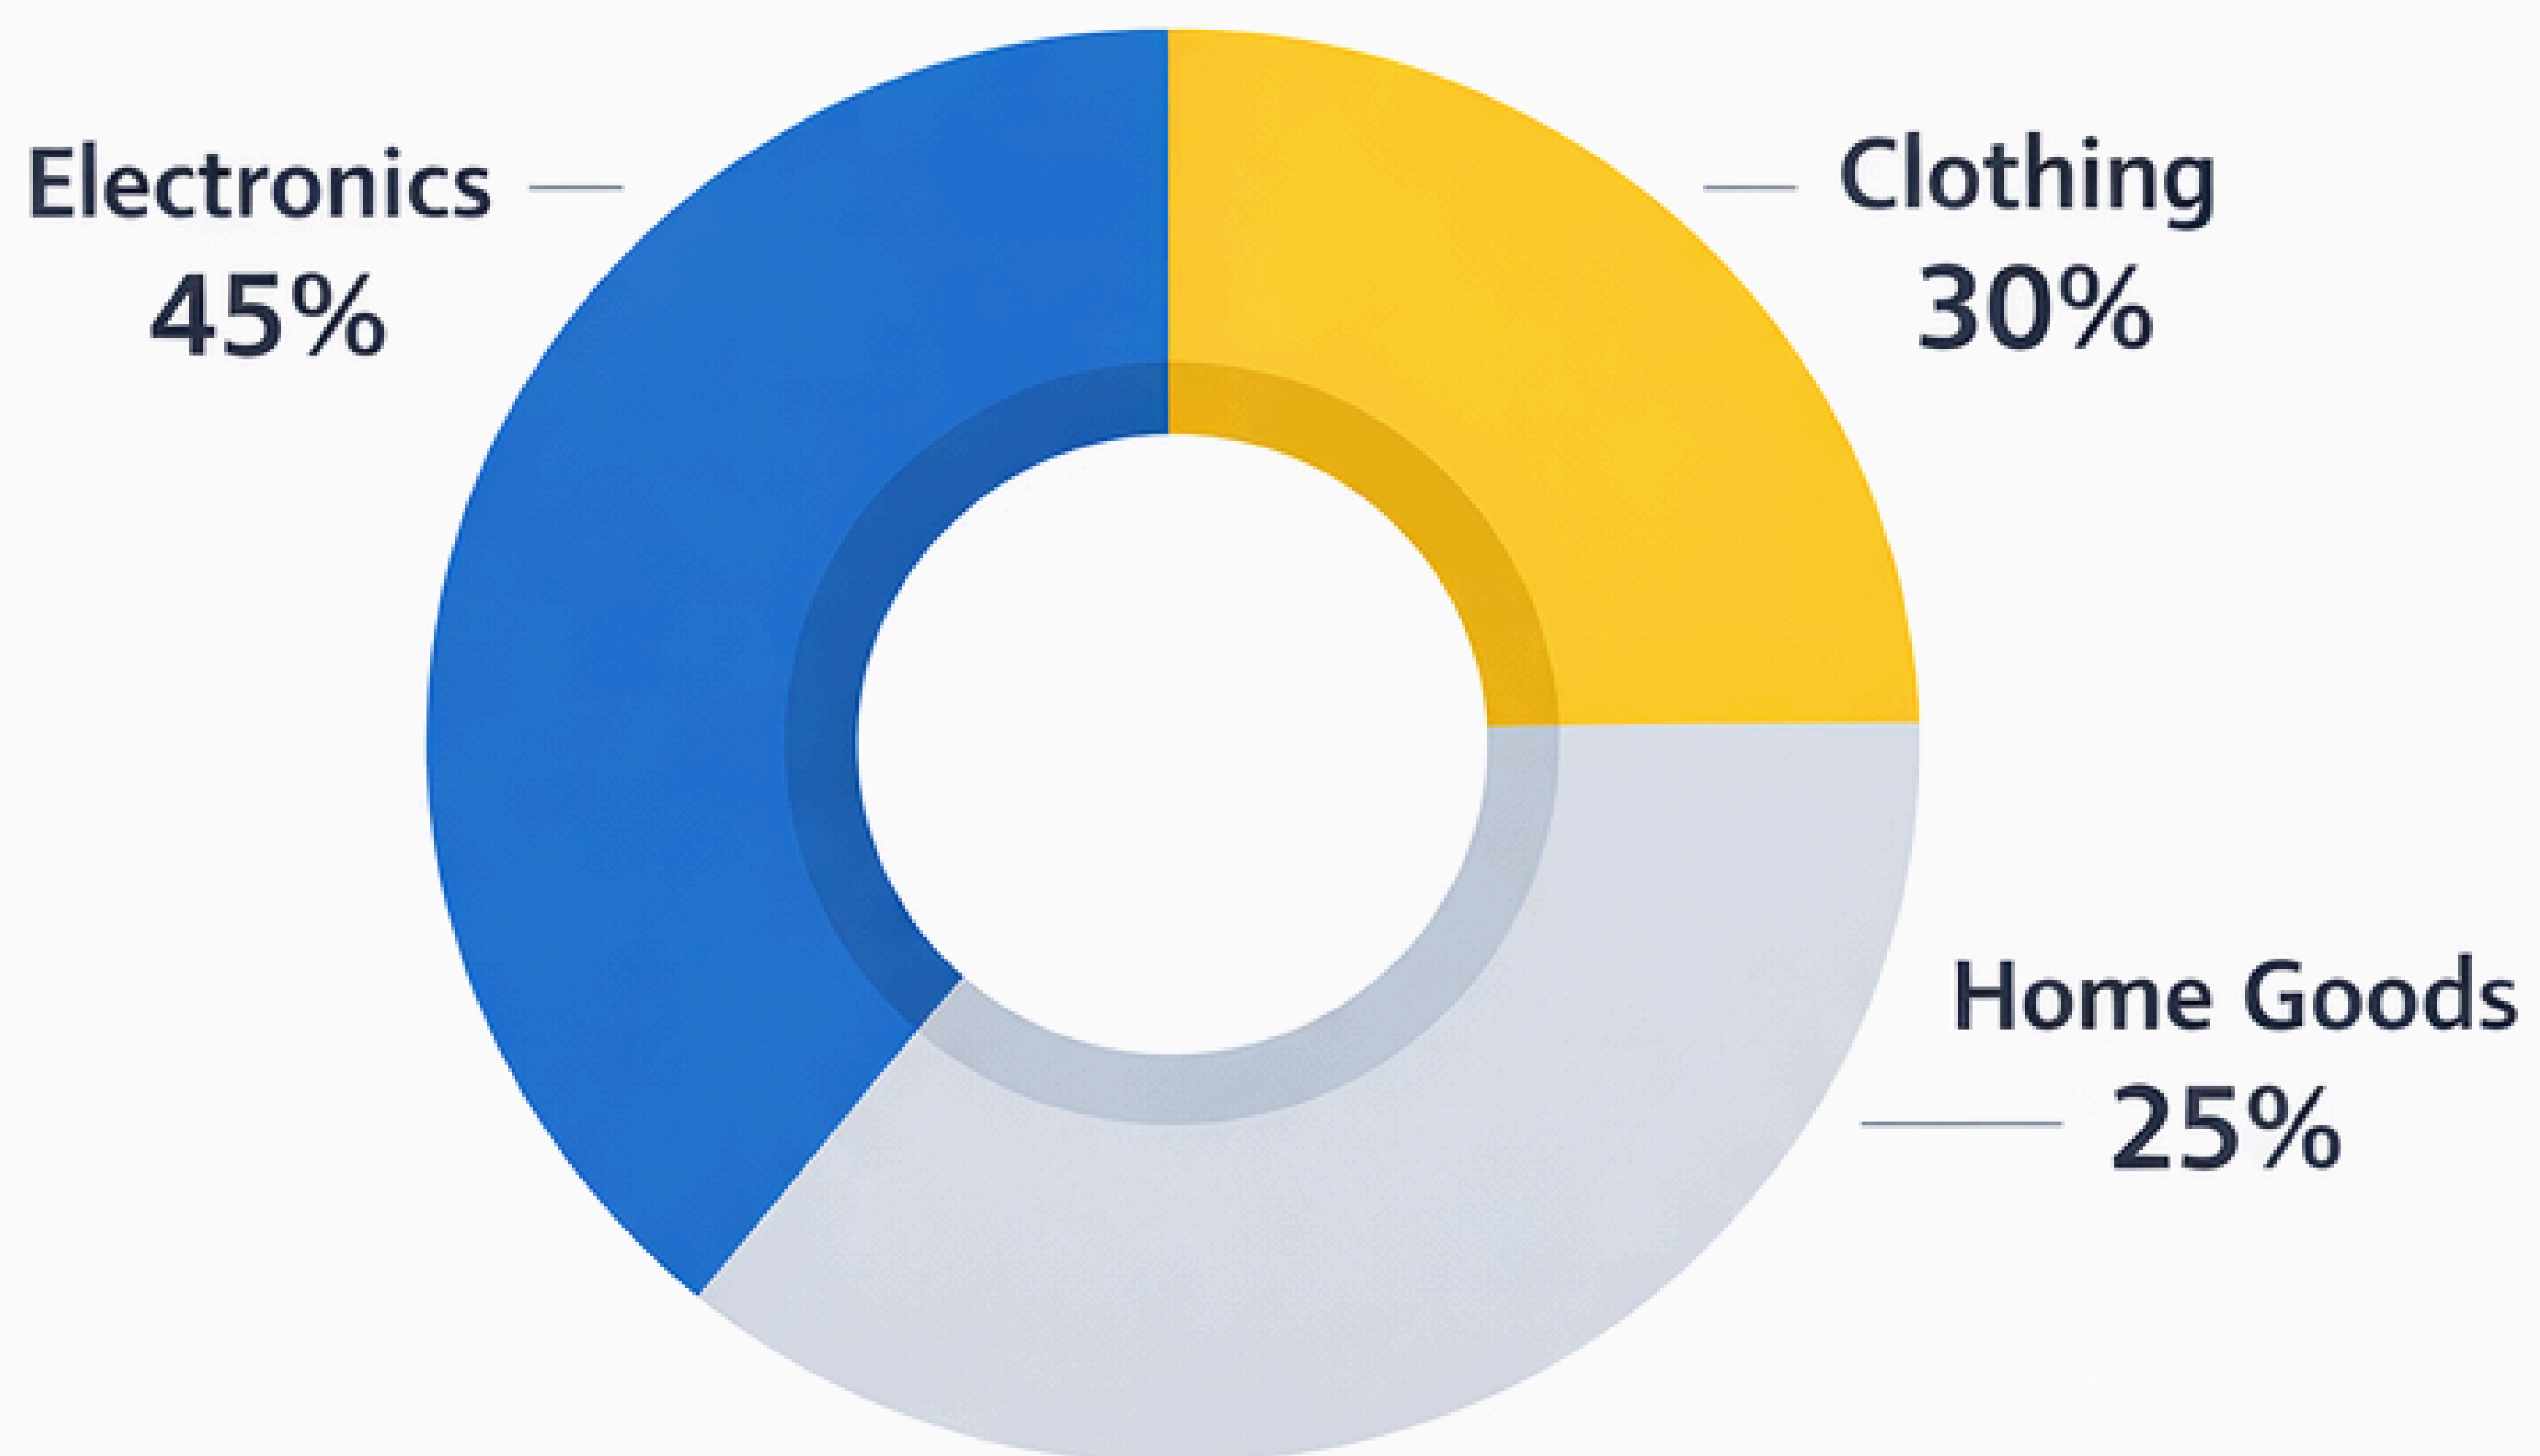

To compare parts of a total

Best when categories are limited (3–6)

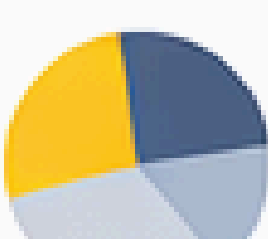

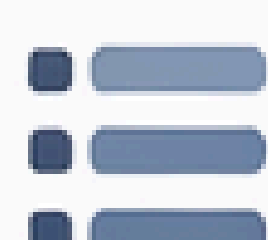

Donut Chart in Power BI

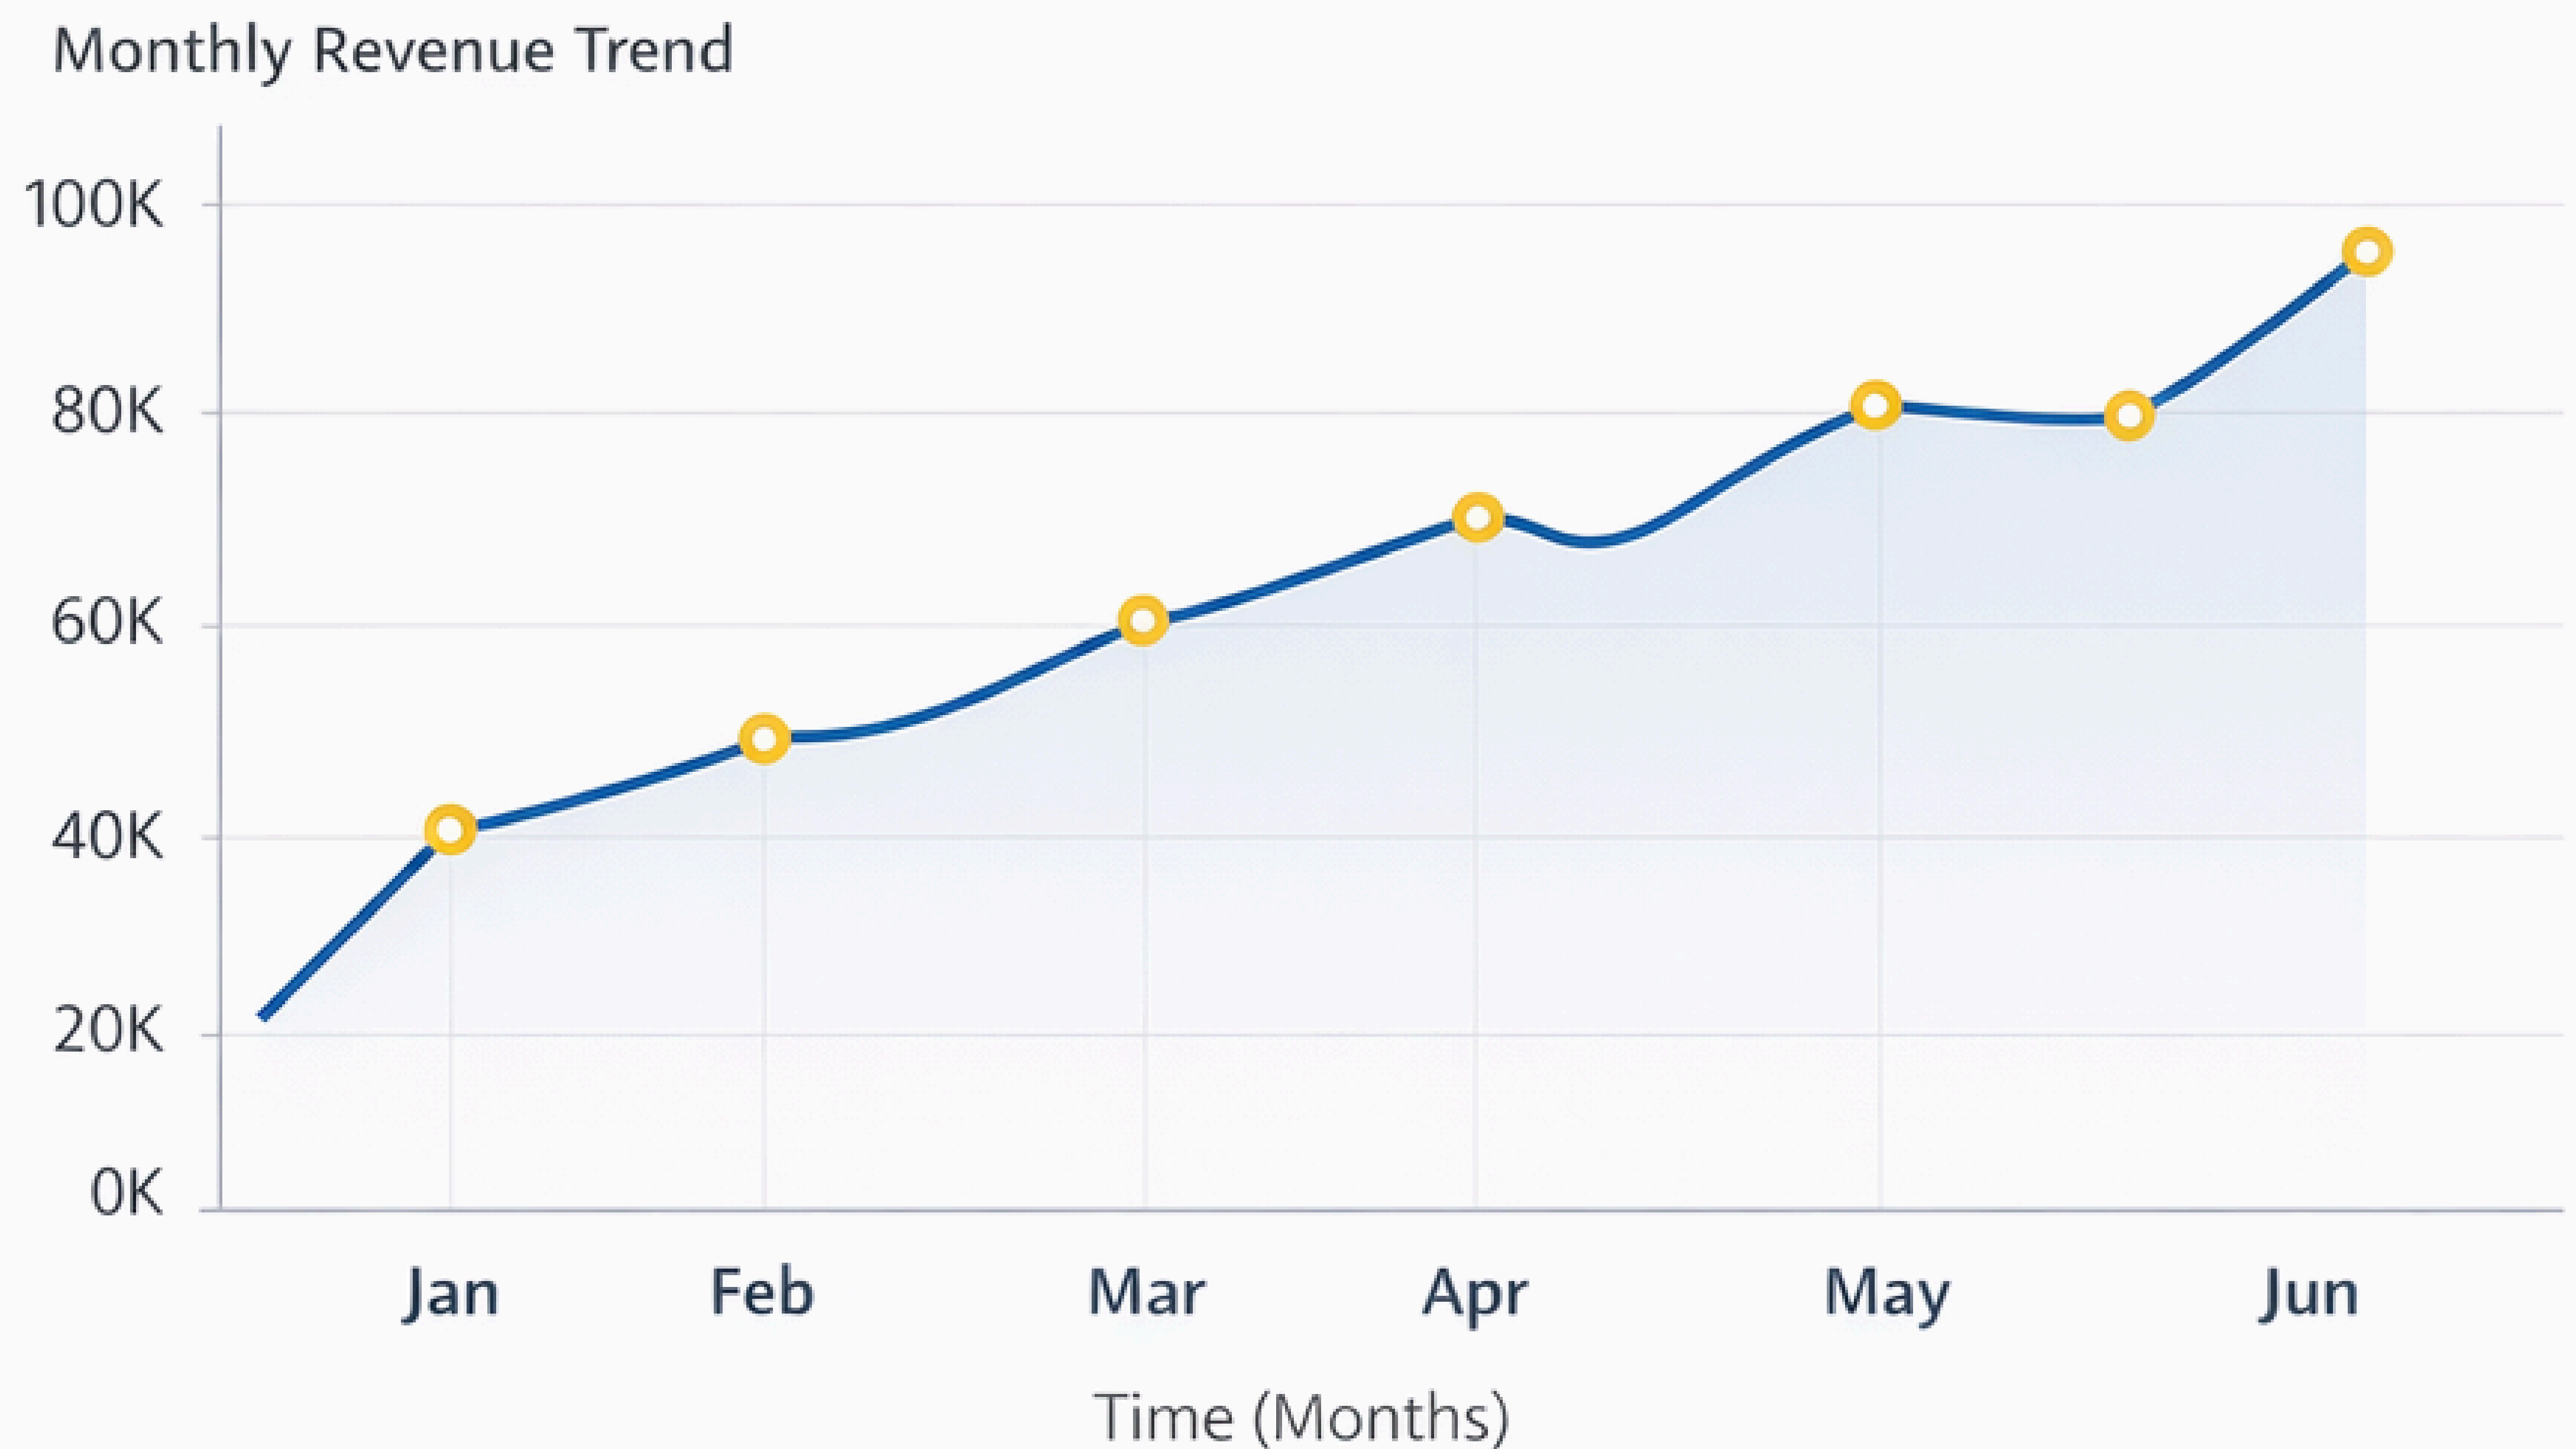

Definition

Donut Chart shows the proportion of each category as a part of the whole, with a hollow center for better readability.

Usage

-  Category-wise percentage distribution
-  Sales by product category
-  Market share comparison
-  Works best with limited categories

Line Chart in Power BI

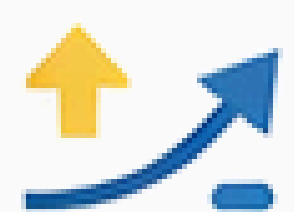

Definition

A **Line Chart** shows trends and changes in data over a continuous period of time.

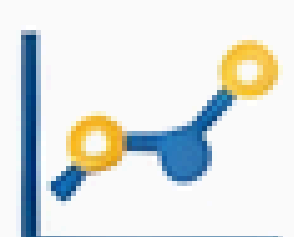

Usage

Track sales or revenue trends

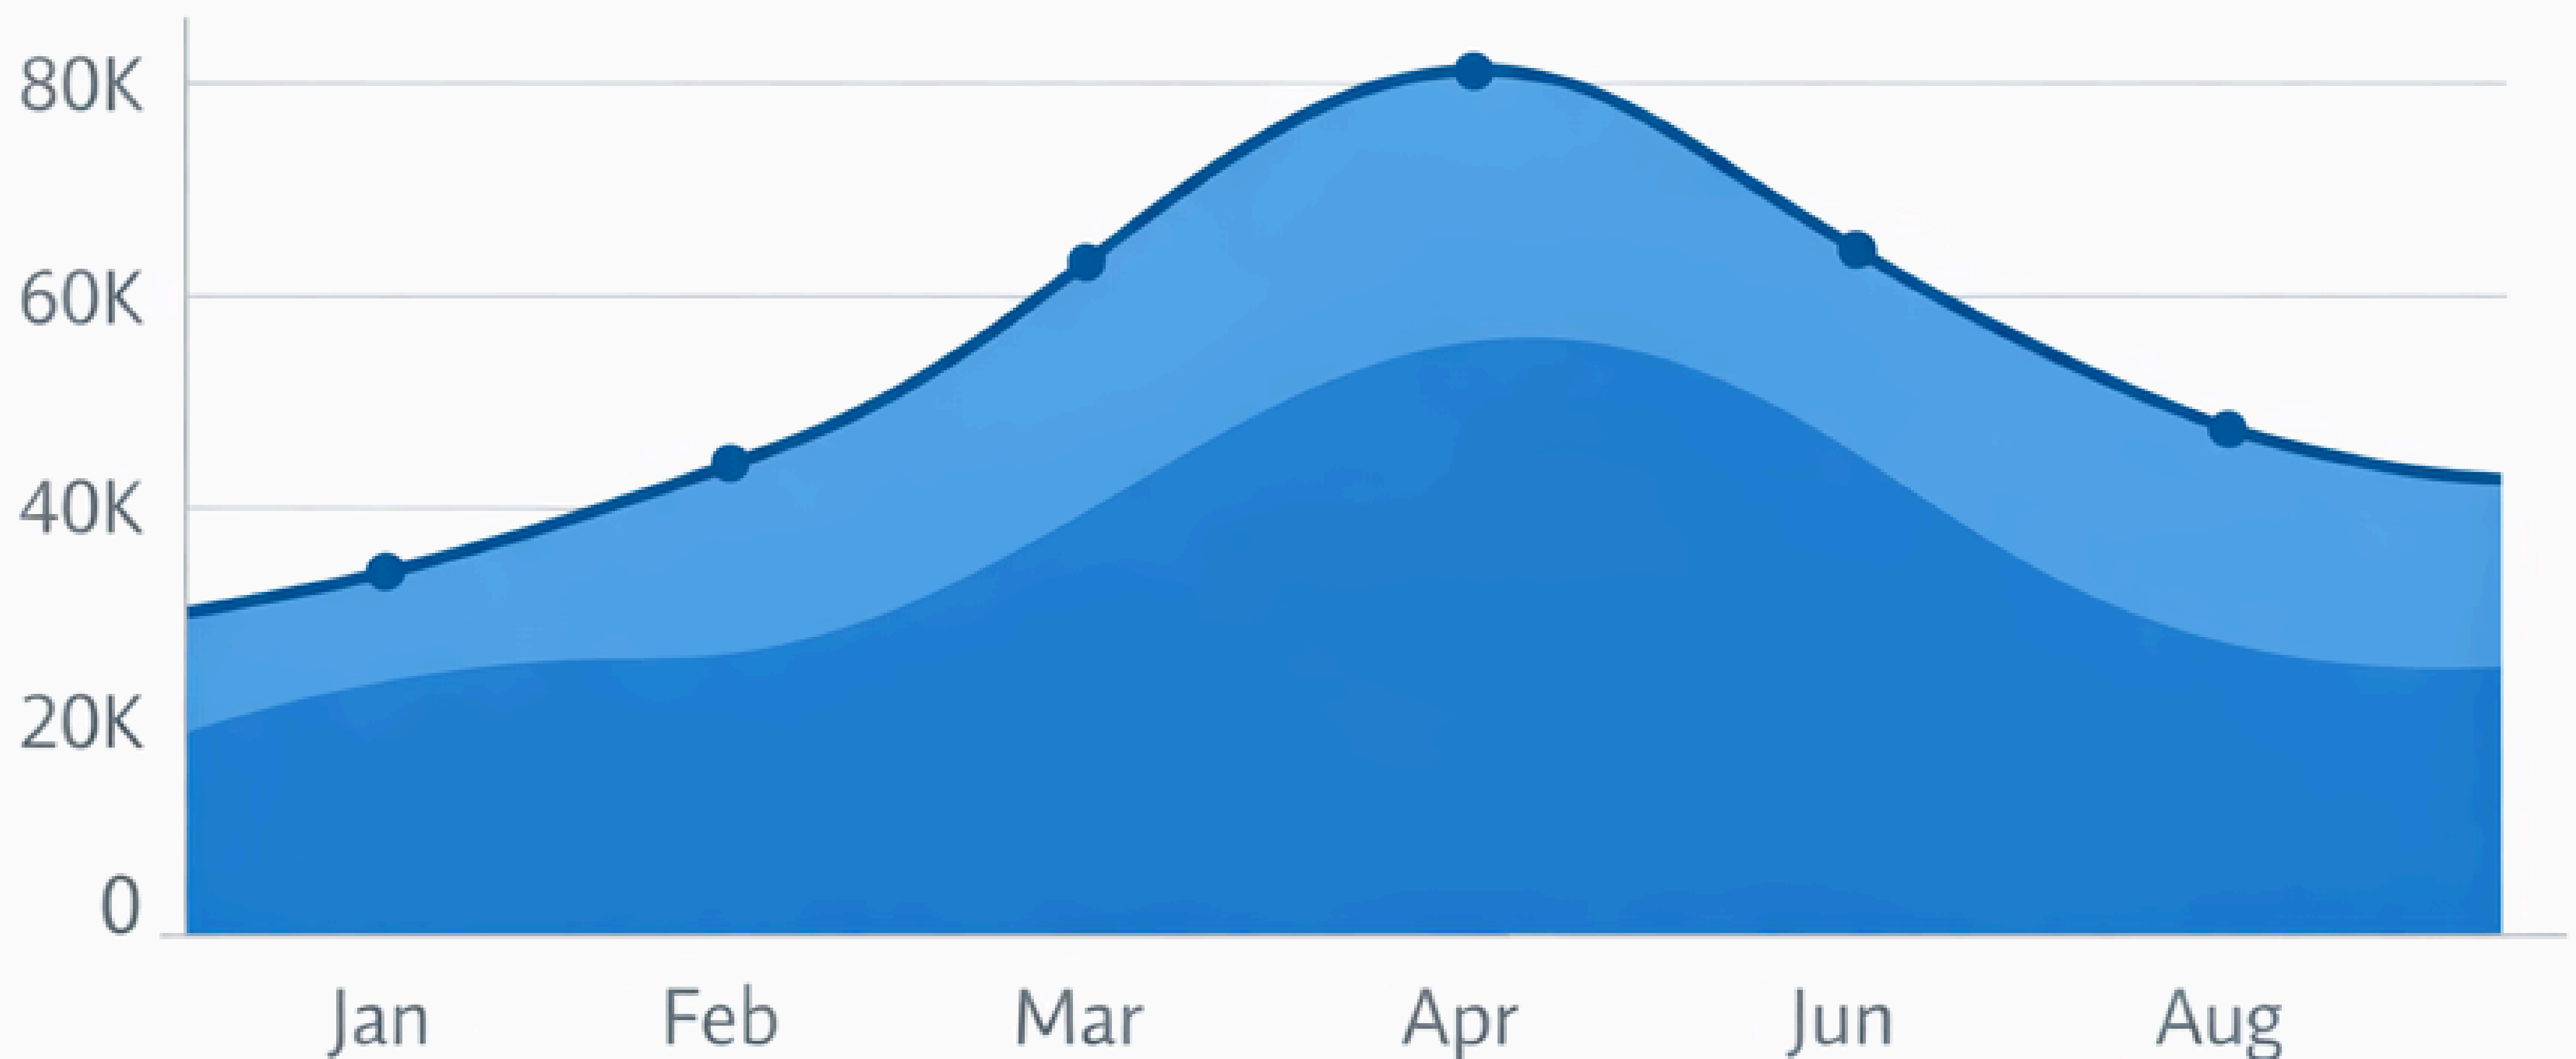

Analyze growth or decline over time

Compare performance across periods

Area Chart in Power BI

Sales

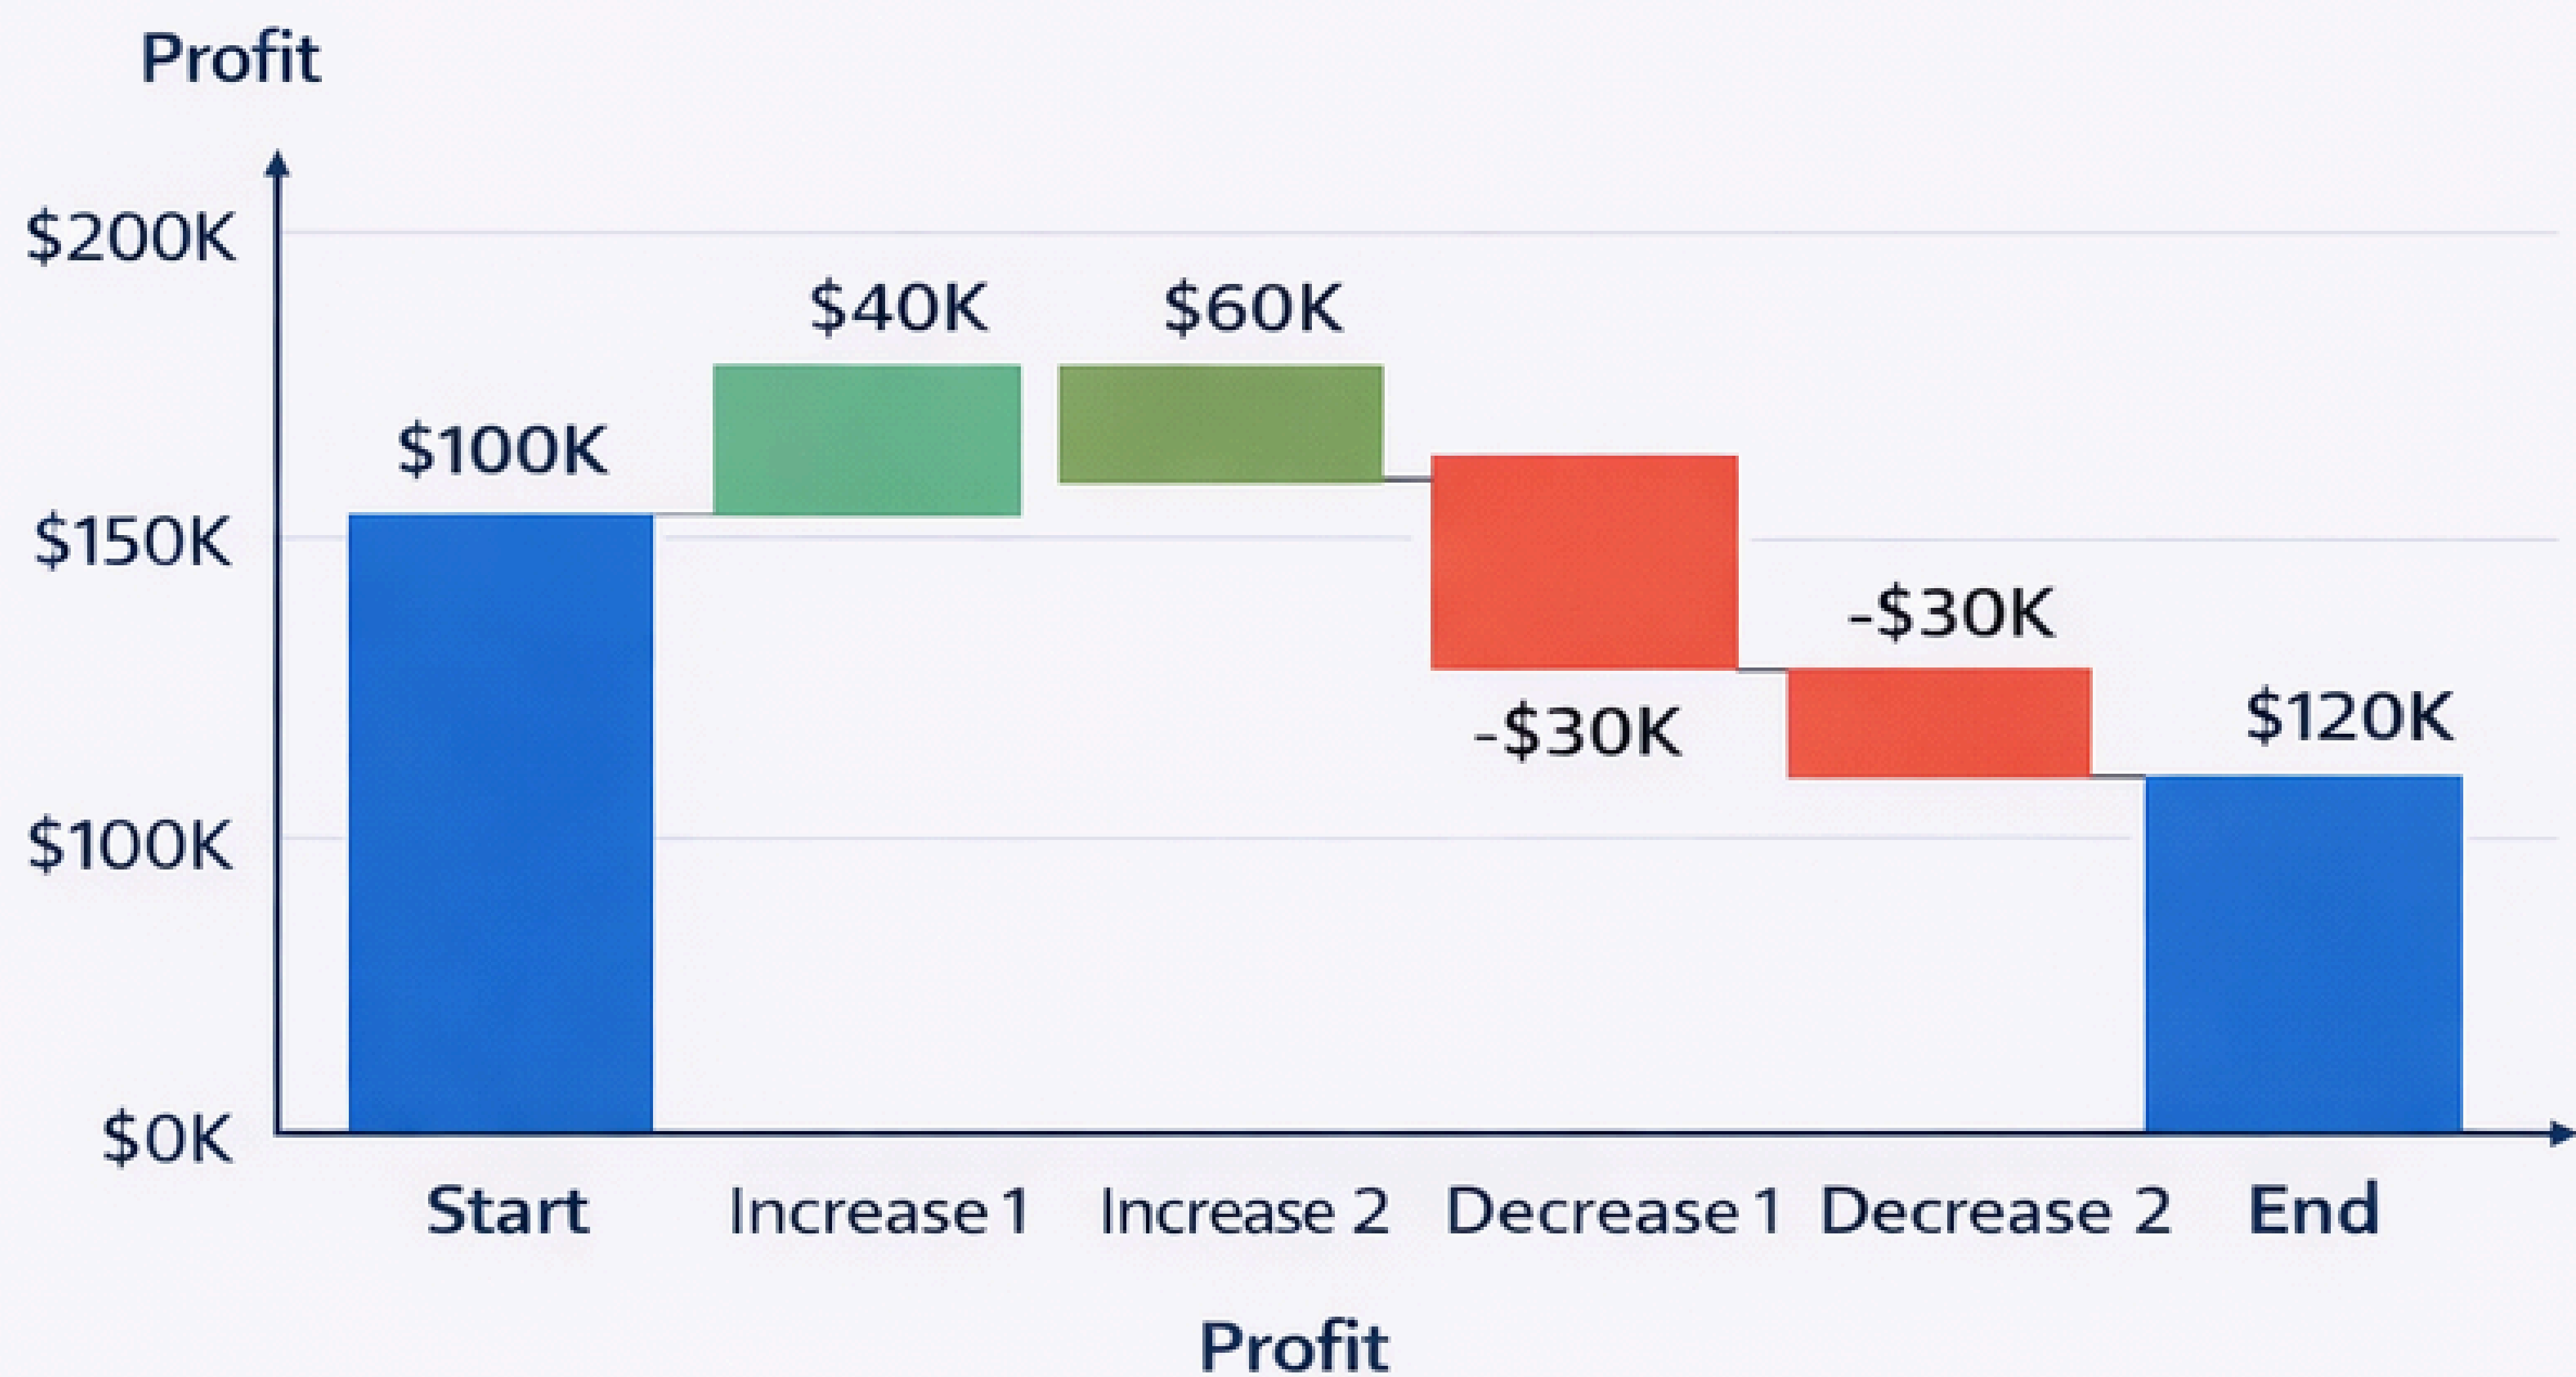

Definition:

An **Area Chart** displays quantitative data over time, emphasizing the magnitude of change by filling the area under the line.

When to Use:

- To track **trends** over time
- To show **growth** or decline clearly
- To **compare** cumulative values

Waterfall Chart in Power BI

Definition

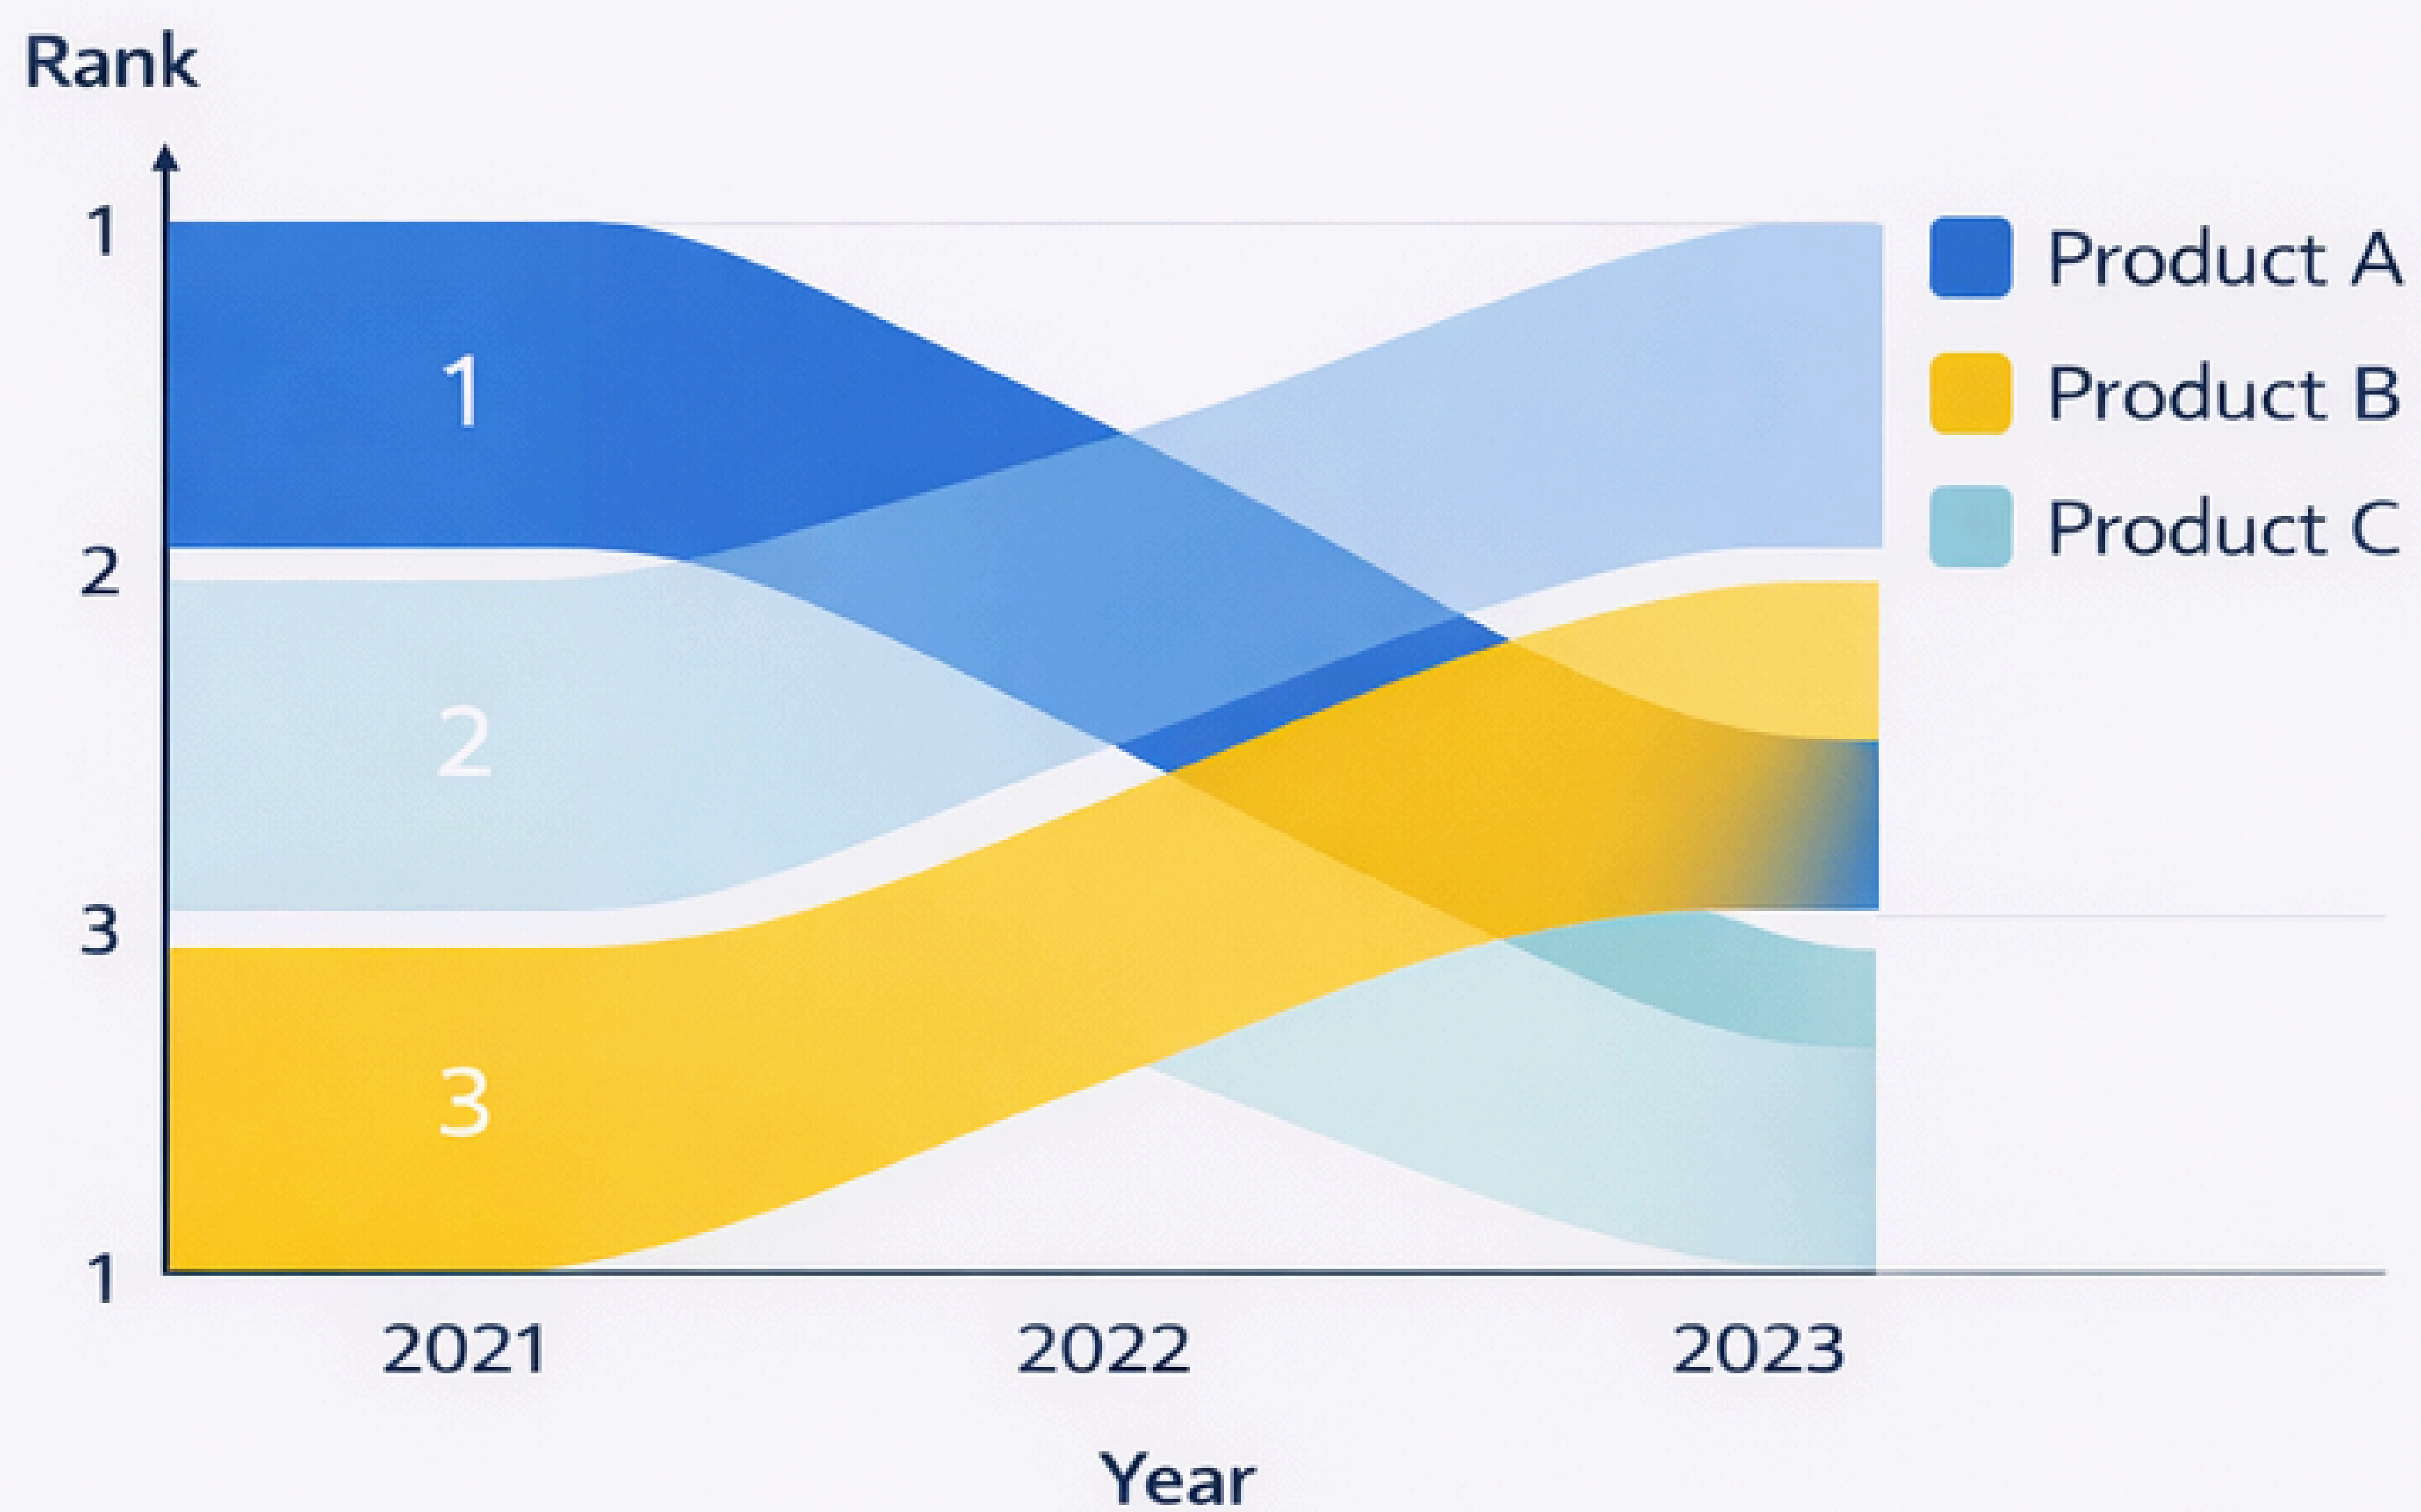

A **Waterfall Chart** shows how an initial value increases or decreases through a series of positive and negative changes, leading to a final total.

When to Use

- To analyze profit & loss breakdown
- To understand contribution of each factor to a final value
- To explain financial performance clearly

Ribbon Chart in Power BI

Definition

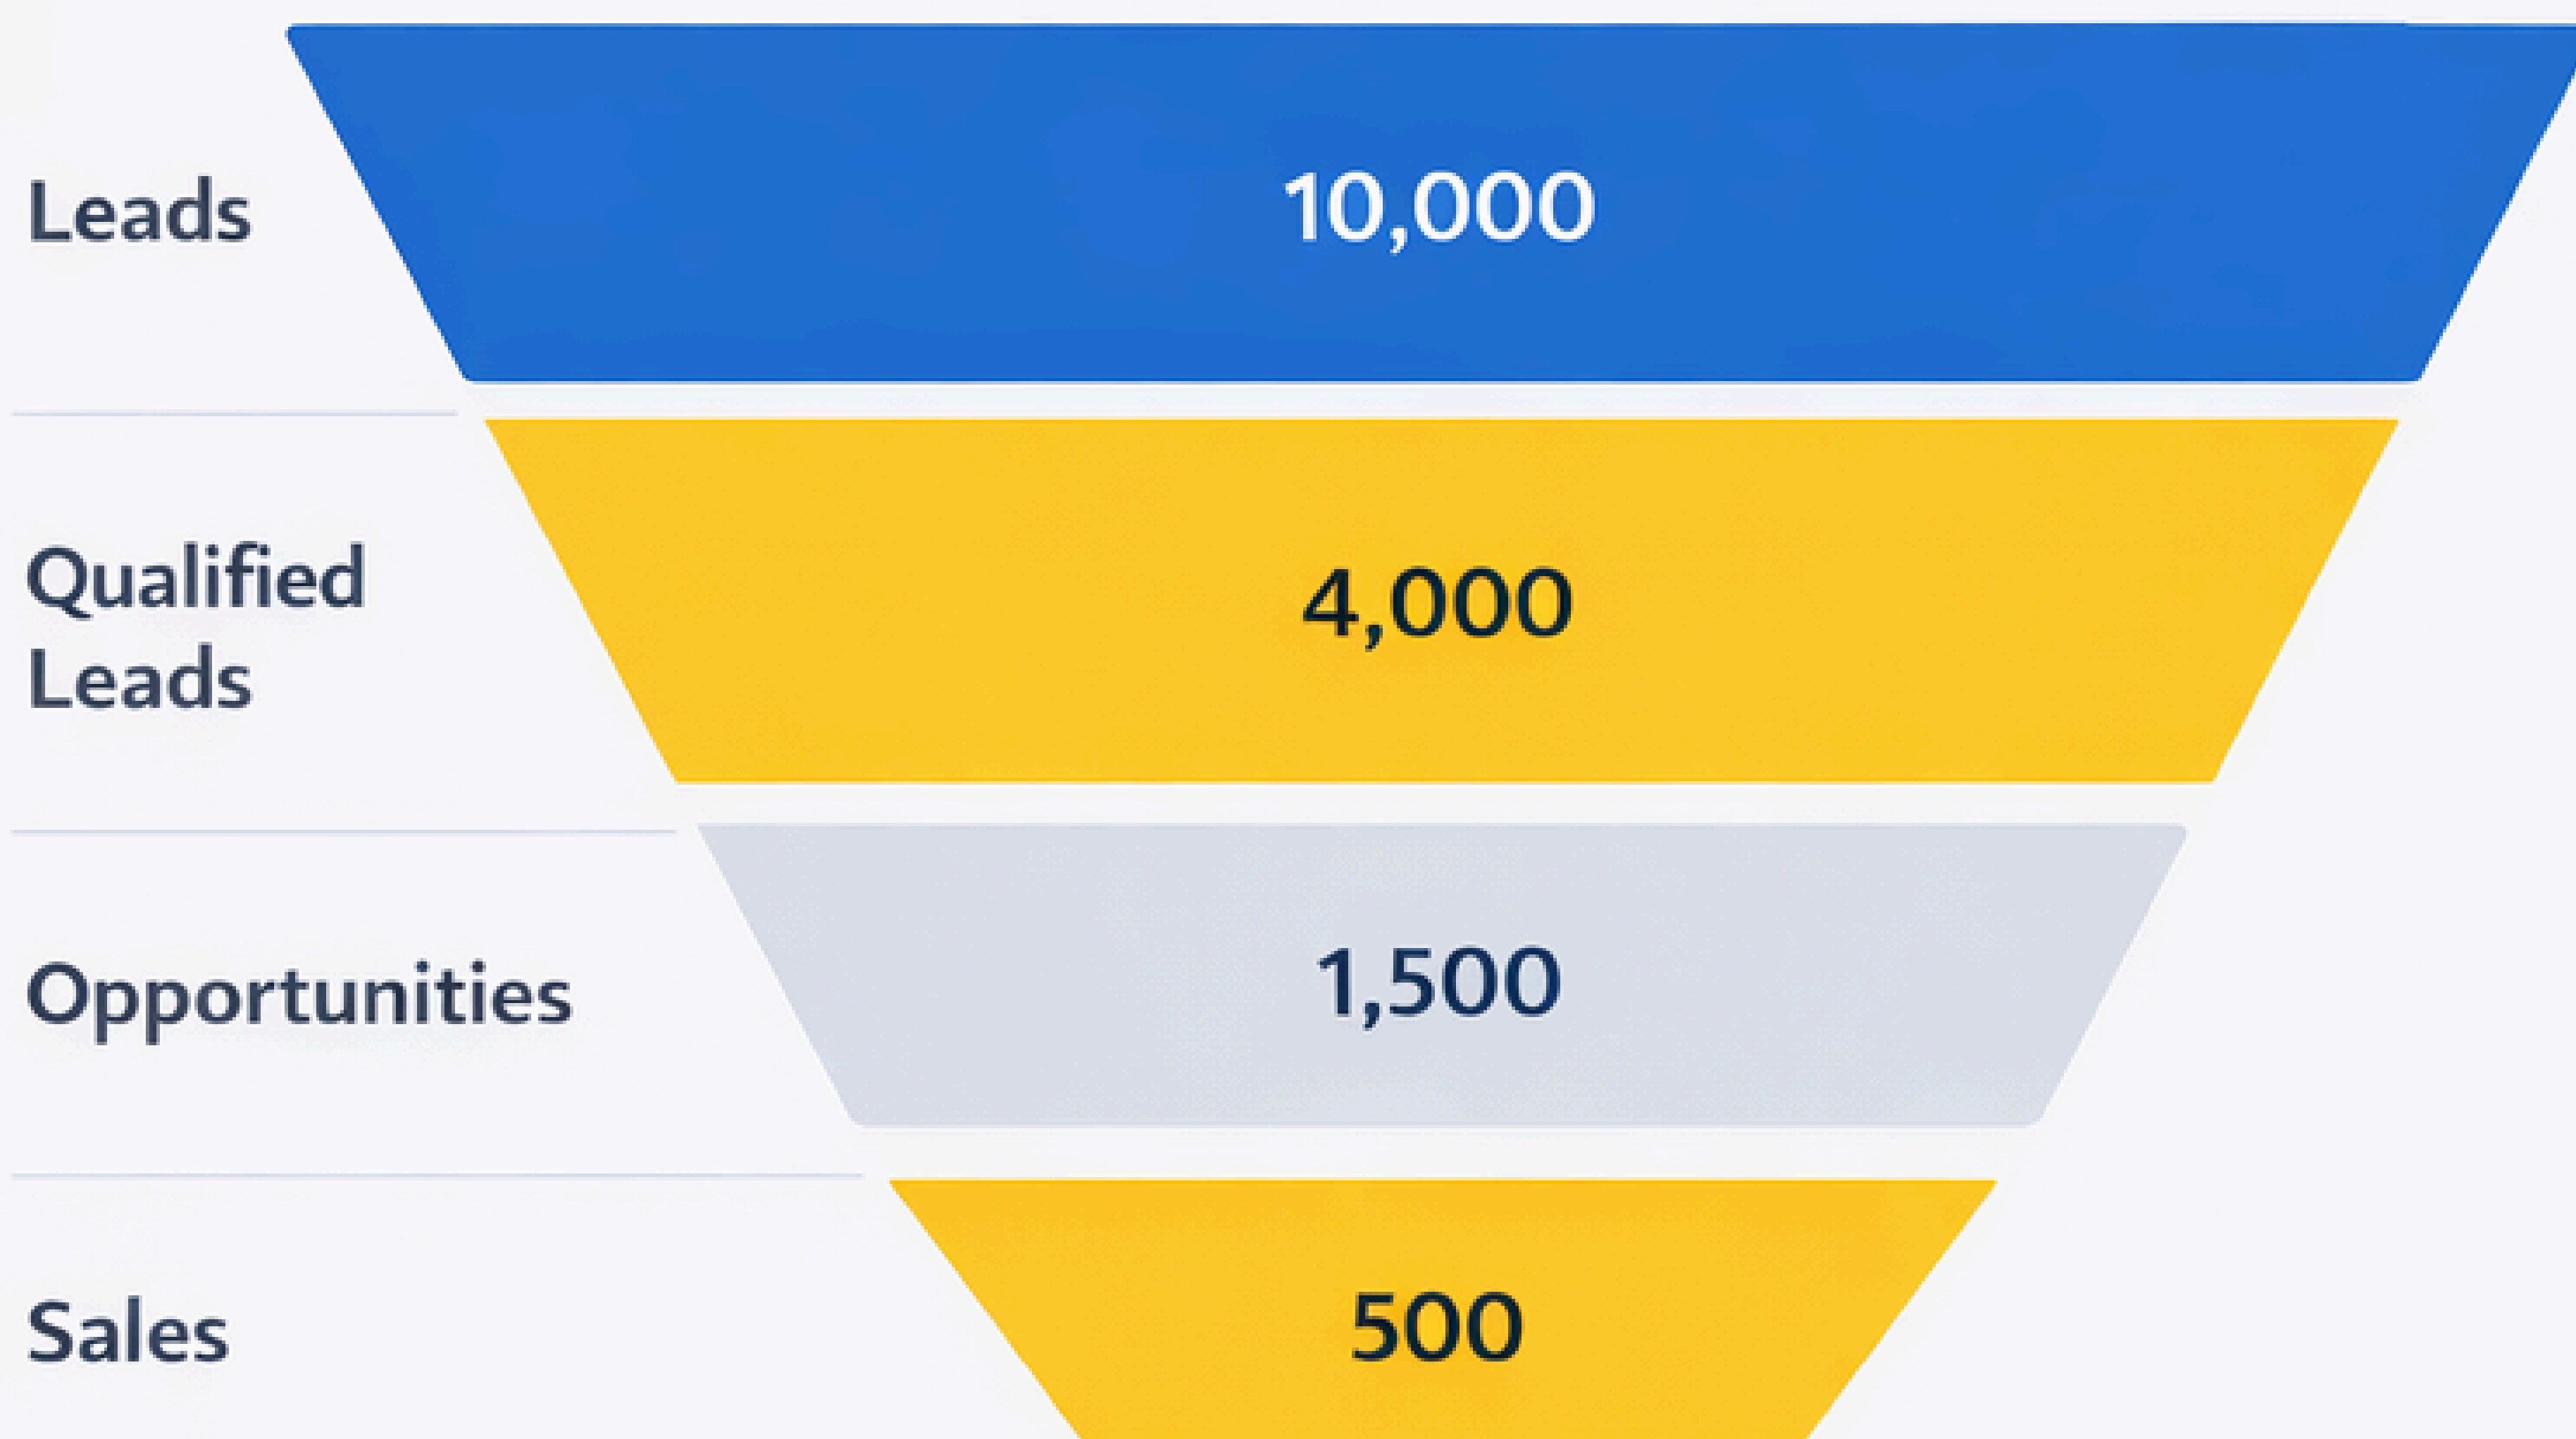

A **Ribbon Chart** shows how the ranking of categories changes over time by visualizing shifts in position.

Usage

- Track changes in market share
- Compare ranking trends over time
- Identify leaders and drop-offs
- Analyze category performance dynamics

Funnel Chart — Power BI

Visualizing stage-wise drop-offs

Definition

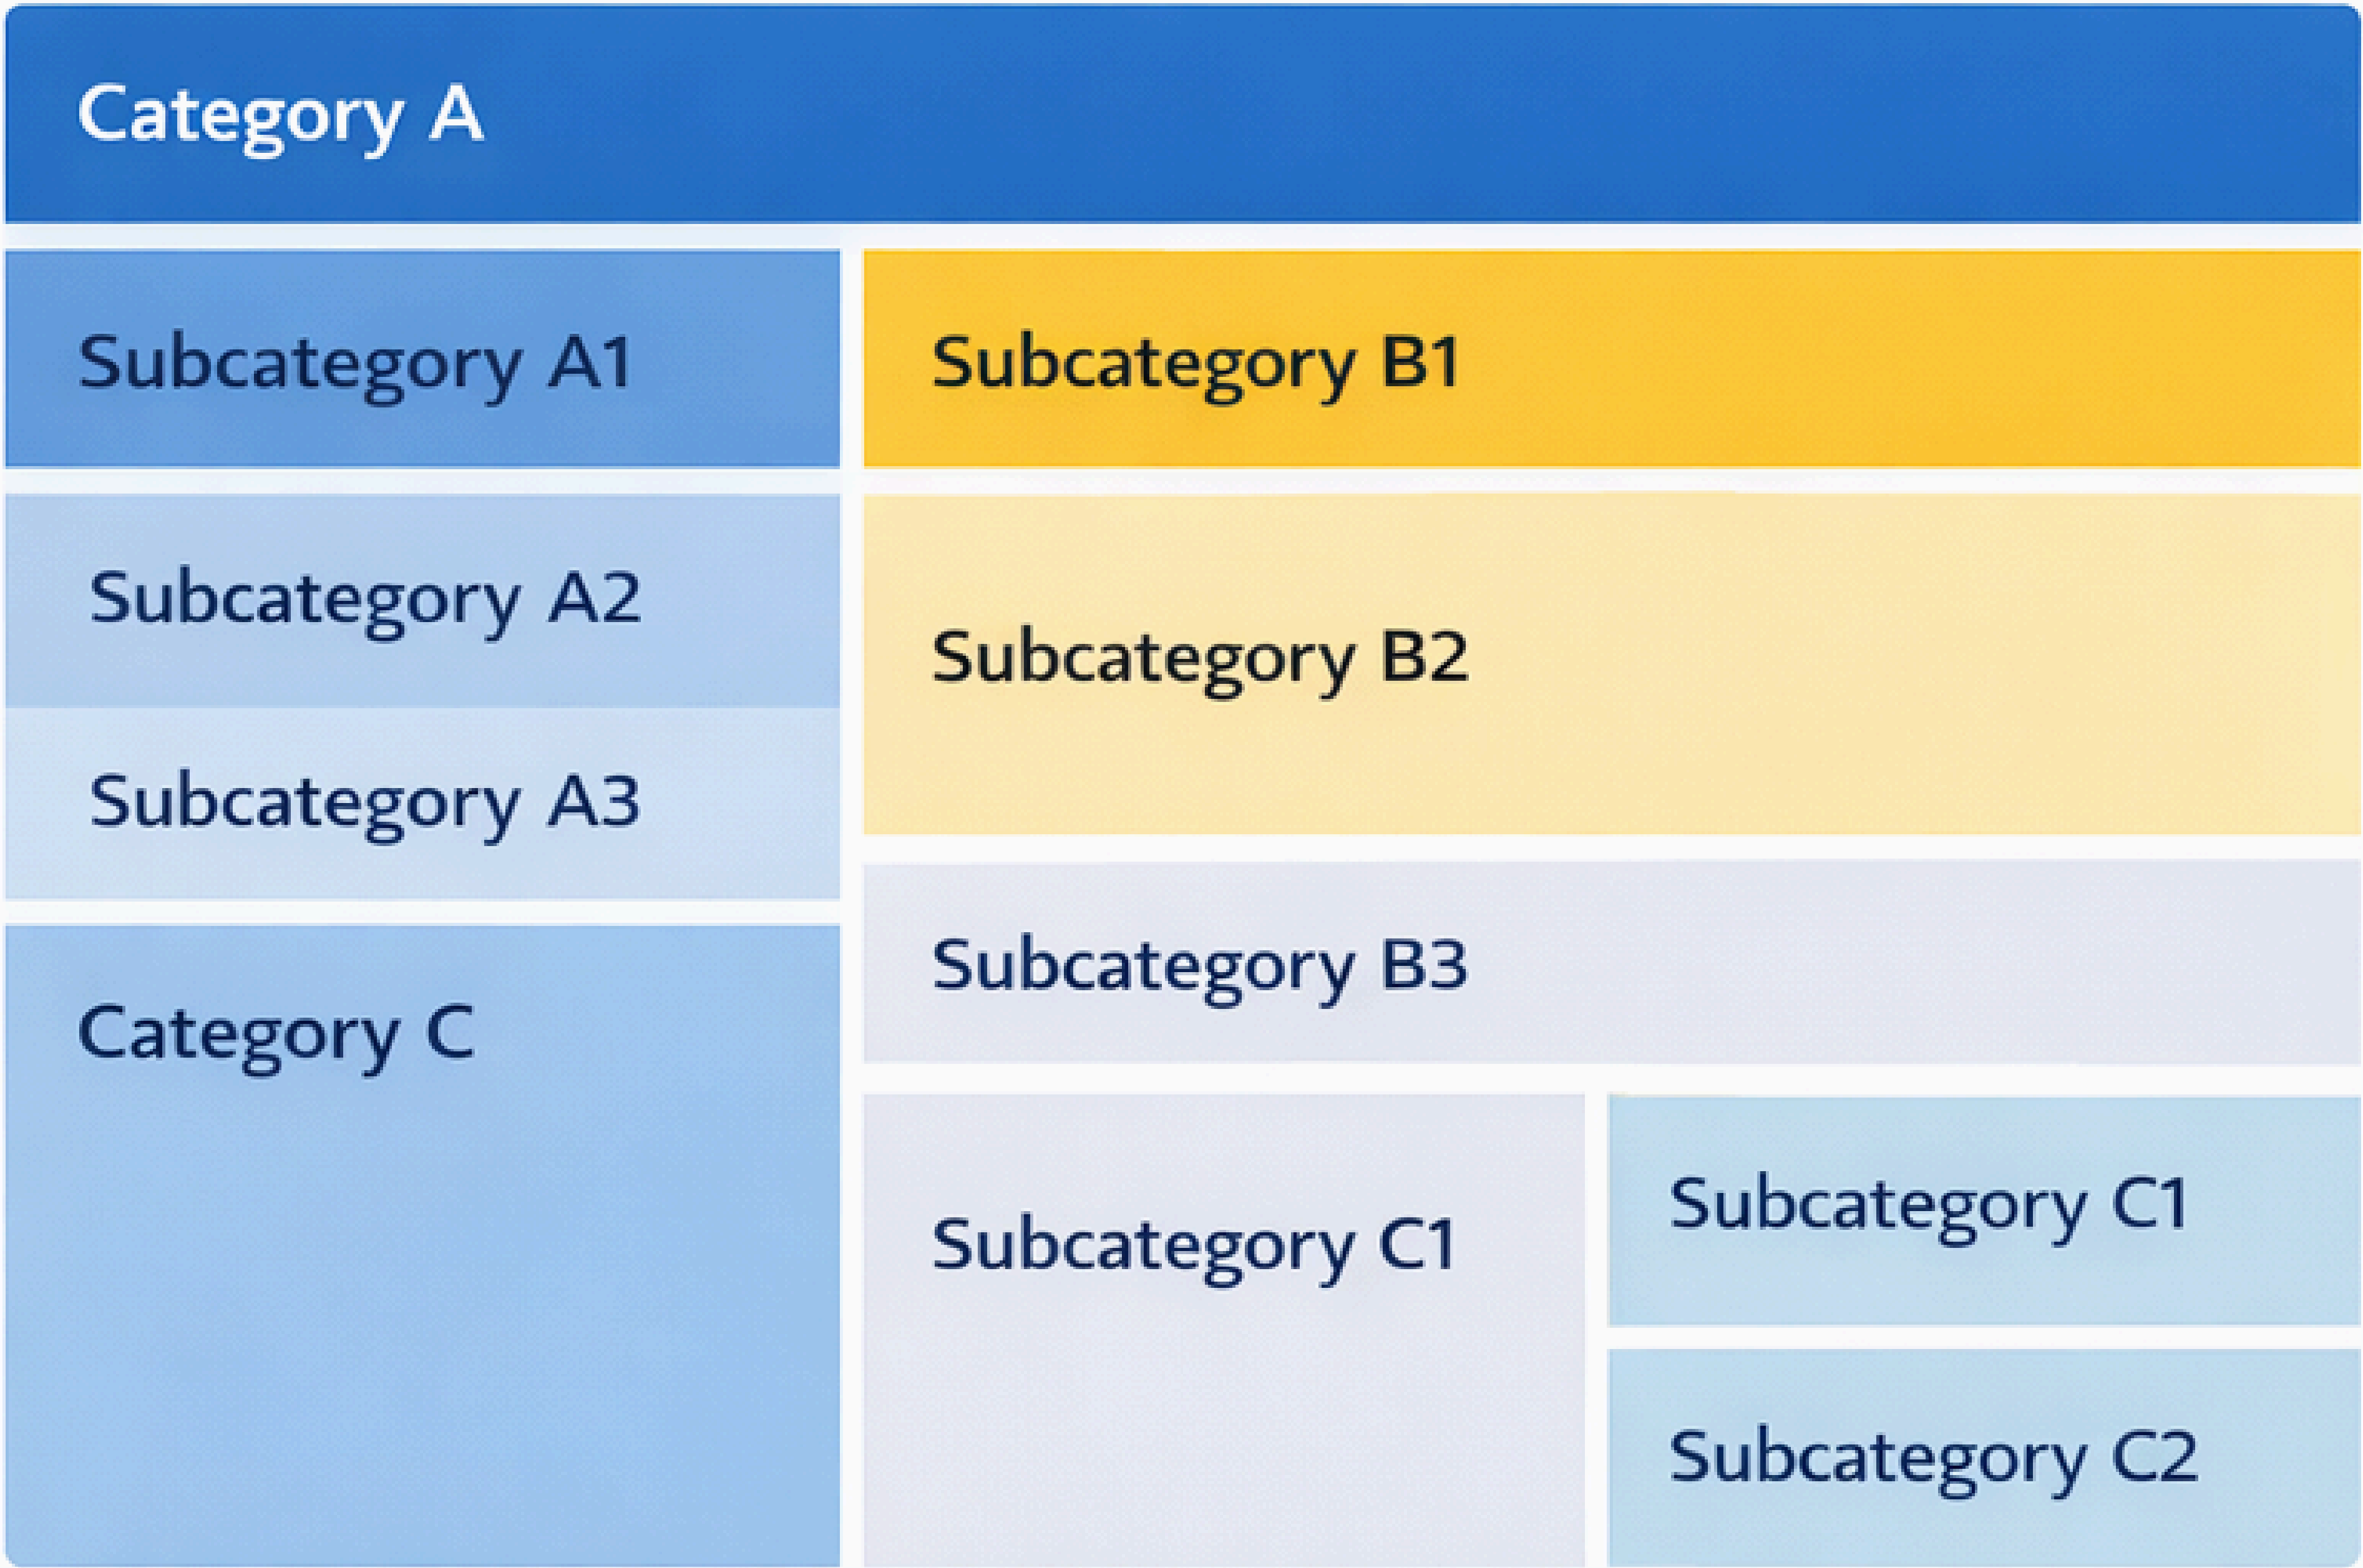

A **Funnel Chart** shows how values reduce across sequential stages of a process.

When to Use

- Sales pipeline analysis
- Conversion tracking
- Marketing funnels
- Process drop-off analysis

Treemap in Power BI

Definition

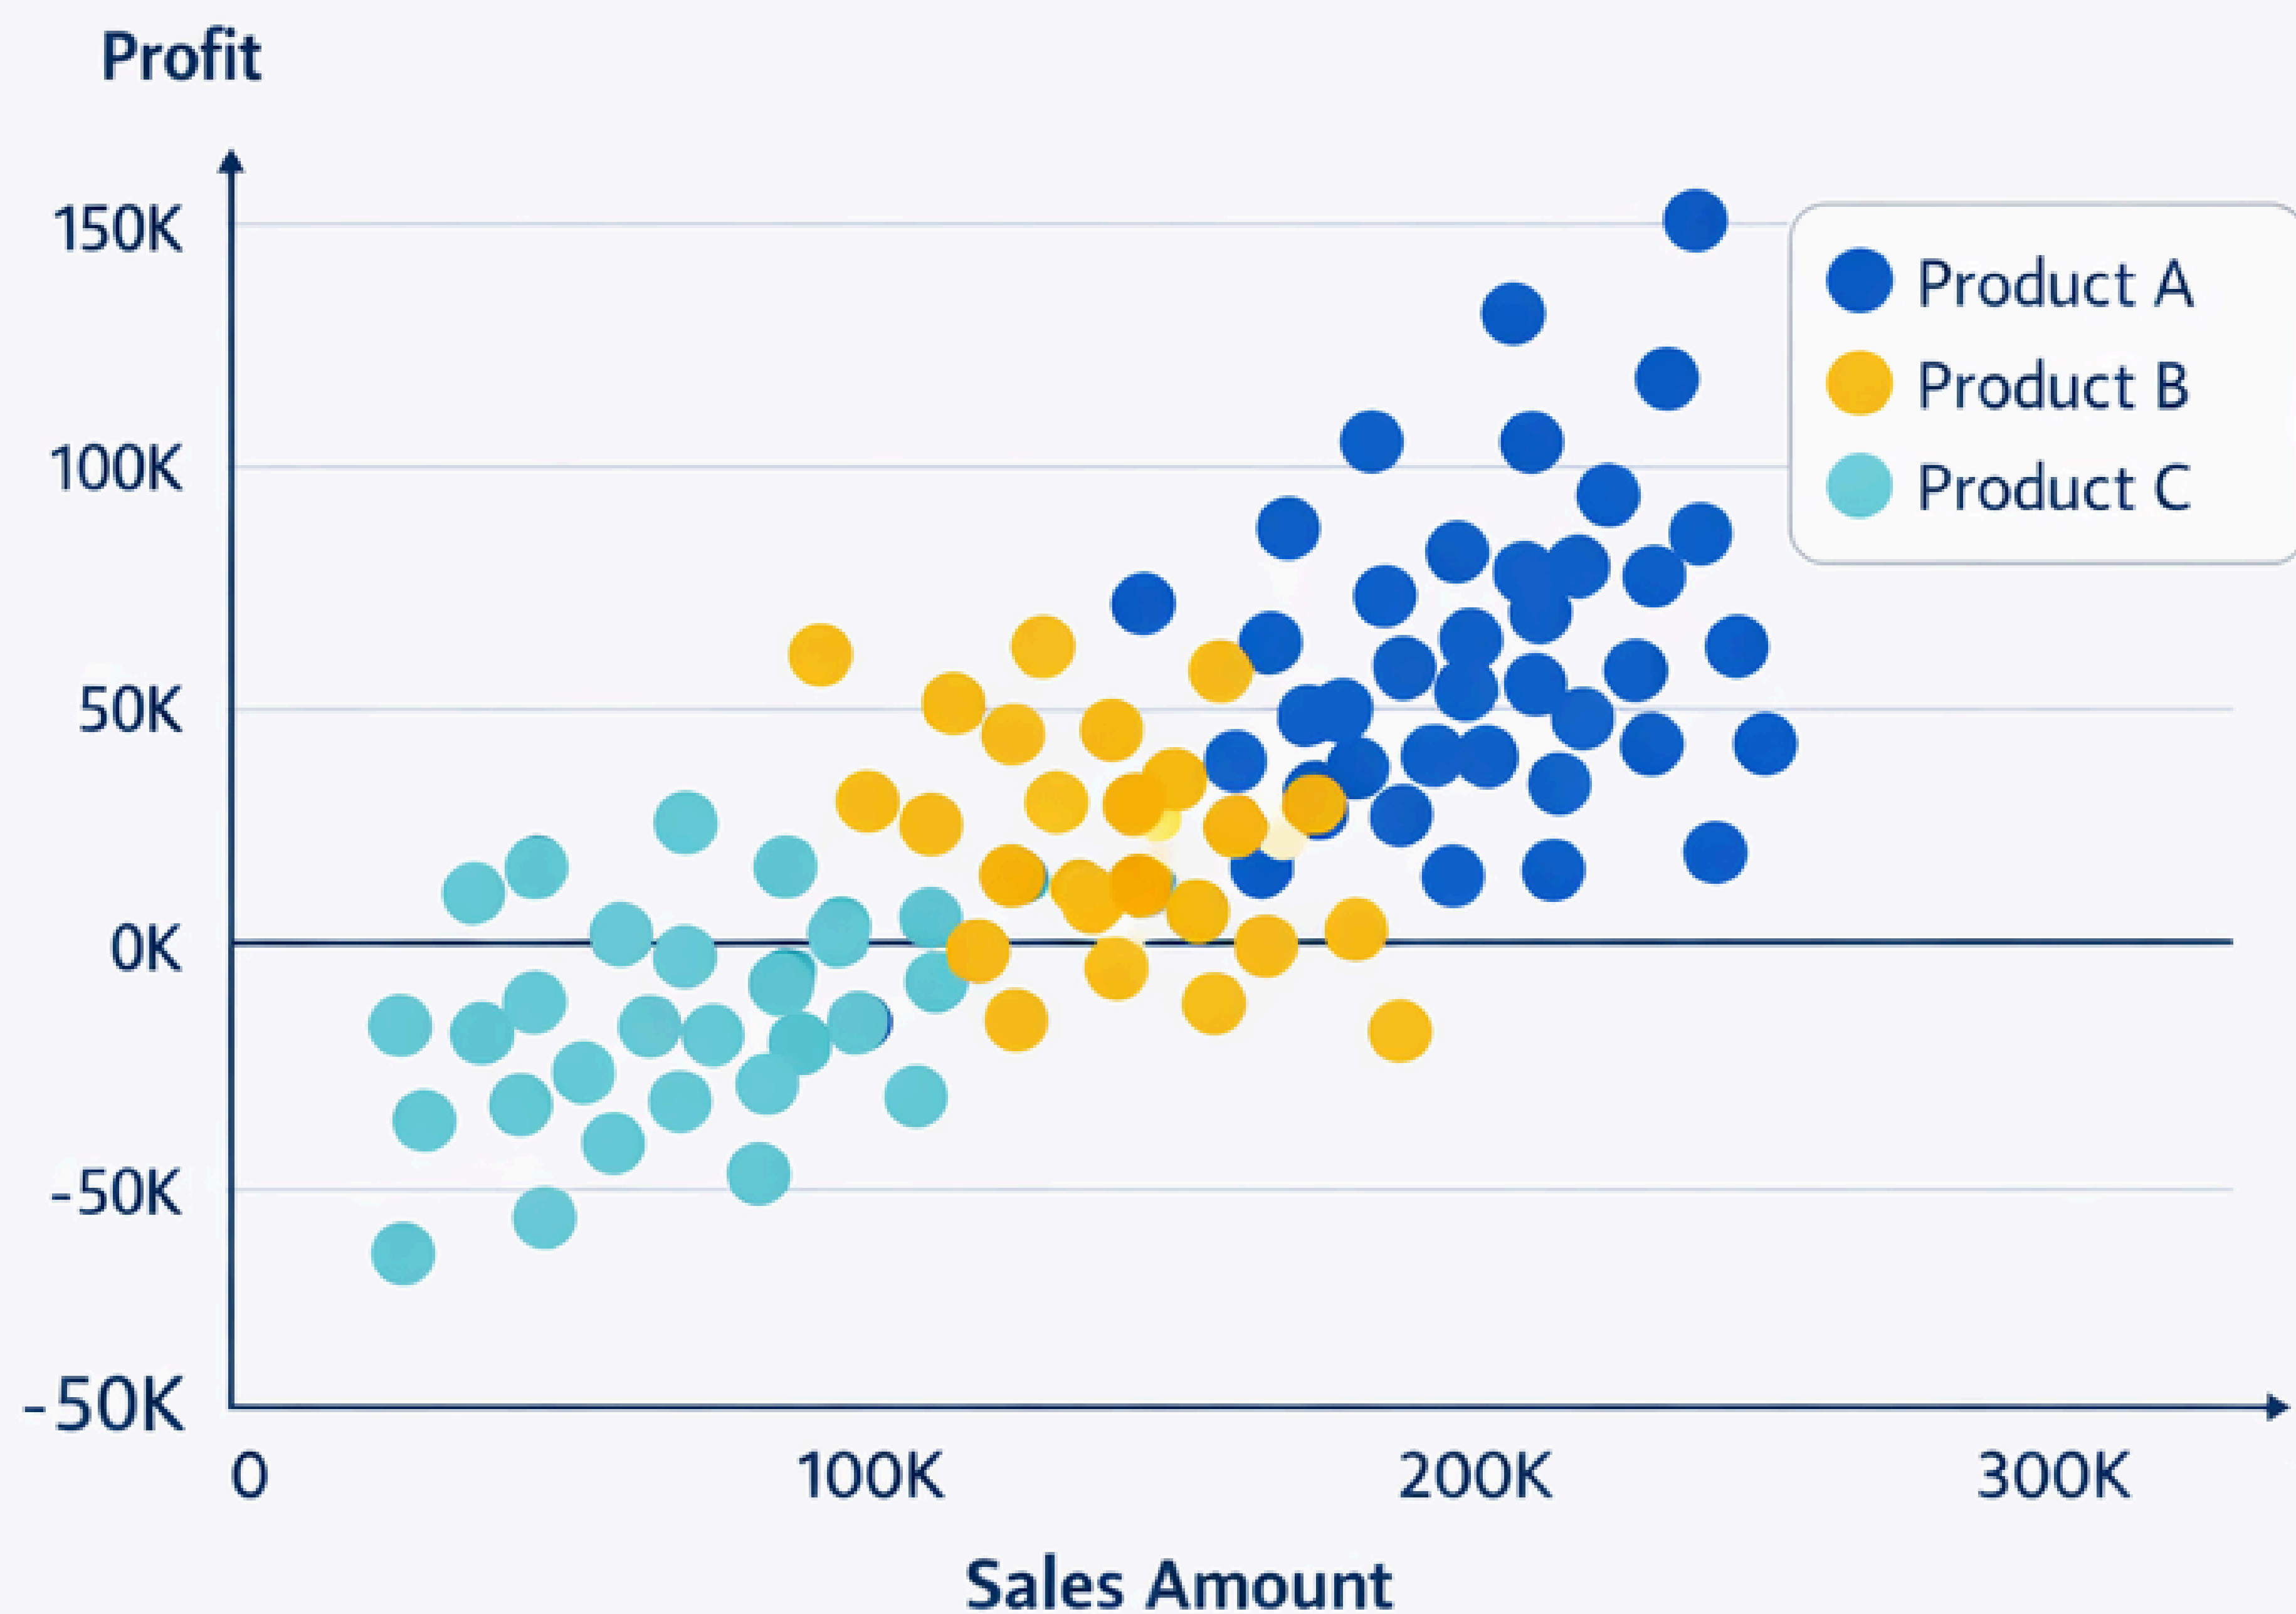

A **Treemap** displays hierarchical data using nested rectangles.

Usage

- Compare part-to-whole relationships
- Analyze category contribution
- Handle large datasets visually

Scatter Plot in Power BI

Definition

A **Scatter Plot** displays the relationship between two numerical variables and helps identify patterns, trends, or outliers in data.

Usage / When to Use

- To analyze correlation between two measures
- To identify outliers or unusual data points
- To compare performance across categories
- Common in sales, finance, and performance analysis
